DESCRIPTORS Academic Achievement; Adult Education; Degrees (Academic); *Educational Finance; Educational Trends; Elementary Secondary Education; Employment Patterns; *Enrollment; Federal Programs; Higher Education; Income; *Institutional Characteristics; Libraries; National Norms; Postsecondary Education; Preschool Education; Private Schools; Public Schools; *School Demography; School Funds; *School Statistics; Student Characteristics; Tables (Data); Teacher Characteristics; Vocational Education

ABSTRACT

In 6 chapters, 173 tables, and 12 figures, this document provides large amounts of statistical data on most aspects of United States education, both public and private. The chapters cover (1) all levels of education, (2) elementary and secondary education, (3) college and university education, (4) adult and vocational education, (5) federal programs for education and related activities, and (6) special studies and statistics related to education. Information is contained on a variety of subjects including the number of schools and colleges, teachers, enrollments, graduates, educational attainment, finances, federal funds for education, employment and income of graduates, libraries, and international education. Among the data appearing for the first time in the document are the following: the state figures on the transportation of public school pupils; enrollment in public schools by grade span; a distribution of public schools by size of enrollment; schools, enrollment, staff, and finances in 120 of the largest school systems; trends in graduate enrollment in institutions of higher education; courses taken by participants in adult education; and data on the use of computers in public schools. A short introduction points out major findings, while each chapter has brief overviews of significant trends. An index is included. (MLF)

National Center for Education Statistics

"The purpose of the Center shall be to collect and disseminate statistics and other data related to education in the United States and in other nations. The Center shall . . . collect, collate, and, from time to time, report full and complete statistics on the conditions of education in the United States; conduct and publish reports on specialized analyses of the meaning and significance of such statistics; . . . and review and report on education activities in foreign countries."--Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e-1).

FOREWORD

The 1983–84 edition of the *Digest of Education Statistics* is the 21st in a series of publications initiated by this office in 1962. (The *Digest* has been issued annually except for a combined edition for the years 1977 and 1978.) Its primary purpose is to provide an abstract of statistical information covering the broad field of American education from prekindergarten through graduate school. It does this by using materials from numerous sources, including the statistical surveys and estimates of the National Center for Education Statistics and other appropriate sources, both governmental and nongovernmental. The publication contains information on a variety of subjects within the field of education statistics, including the number of schools and colleges, teachers, enrollments, graduates, educational attainment, finances, Federal funds for education, employment and income of graduates, libraries, and international education.

The *Digest* is divided into six chapters: All Levels of Education, Elementary and Secondary Education, College and University Education, Adult and Vocational Education, Federal Programs for Education and Related Activities, and Special Studies and Statistics Related to American Education. To qualify for inclusion in this publication, material must be nationwide in scope and of current interest and value. The introduction supplements the tabular materials in chapters I through VI by providing a brief overview of current trends in American education.

In addition to updating many of the statistics that have appeared in previous years, this edition contains a substantial amount of new material. Included among the data appearing for the first time in the *Digest* are the following: State figures on the transportation of public school pupils; enrollment in public schools by grade span; a distribution of public schools by size of enrollment; schools, enrollment, staff, and finances in 120 of the Nation's largest school systems; trends in graduate enrollment in institutions of higher education; courses taken by participants in adult education; and data on the use of computers in public schools.

A number of people have contributed in one way or another to the development of this publication. In particular, the authors would like to acknowledge the substantial contributions made by Imelda Smallwood and Esther Tron of the Statistical Information Branch. Mrs. Smallwood developed materials in a number of areas, including tables concerned with adult and vocational education, the employment of high school and college graduates, international education, and the National Assessment of Educational Progress. Mrs. Tron was responsible for a number of the tables dealing with Federal programs for education and related activities.

In the past, the *Digest of Education Statistics* has proved to be of interest and value to educational researchers and administrators, governmental officials, the communications media, the business community, and the general public. We trust that the readers of this 21st edition will find it just as valuable as its predecessors.

Forrest W. Harrison, Chief
Statistical Information Branch

Nancy-Jane Stubbs, *Assistant Administrator for Statistical Services*

FIGURES

	Page
1. The structure of education in the United States	4
2. Percentage changes in public school enrollment, by State: Fall 1971 to fall 1981	30
3. Average annual expenditure per public school pupil transported, by State: 1979–80	39
4. Public elementary and secondary teachers, by subject taught: United States, 1979–80	53
5. Public schools by level and by size of enrollment: United States, fall 1980	65
6. Percentage of high school seniors who had completed three or more years of courses in selected fields in grades 10 through 12: United States, spring 1980	76
7. Percentage increases in the enrollment of college students with selected characteristics: United States, fall 1972 to fall 1982	98
8. Number of coeducational institutions of higher education and the number for men and for women: United States, 1961–62 to 1981–82	106
9. Bachelor's degrees conferred in selected fields: United States, 1965–66 to 1980–81	119
10. Market value of endowment in current and in adjusted dollars in institutions of higher education, by control of institution: United States, 1971 to 1981	150
11. Participation in adult education, by age group, income level, and subject area: United States, May 1981	157
12. Expected lifetime earnings for year-round full-time workers, by sex and by years of school completed: United States, 1979 (in 1981 dollars)	192

TABLES

I. All Levels of Education

Enrollment

	Page
1. Estimated enrollment in educational institutions, by level of instruction and by type of control: United States, fall 1981 and fall 1982	6
2. Enrollment in educational institutions, by type of control, level of instruction, and type of school: United States, fall 1981	7

Page

3. Enrollment in educational institutions, by level of instruction and by type of school: United States, 1899–1900 to fall 1979 8

4. Percent of the population 3 to 34 years old enrolled in school, by race, sex, and age: United States, October 1981 9

5. Percent of the population 3 to 24 years old enrolled in school, by age and by sex: United States, October 1965 to October 1981 10

Teachers and Other Instructional Staff

6. Estimated number of classroom teachers in elementary and secondary schools, and total instructional staff in institutions of higher education: United States, fall 1981 and fall 1982 11

Schools

7. Number of schools, by level and control and by State: 1980–81 12

Educational Attainment

8. Level of school completed by persons age 25 and over and 25 to 29, by race: United States, 1910 to 1982 13

9. Years of school completed by persons 25 years old and over, by State: April 1980 14

10. Illiteracy of the population 14 years old and over, by race, age, and sex: United States, 1959 to 1979 15

Educational Finances

11. Direct expenditures of State and local governments for all functions and for education, by State and by amount per capita and percent of per capita income: 1980–81 16

Page

Educational Achievement

12. National Assessment of Educational Progress for age 9, by subject and by selected characteristics of participants: United States, 1975–82 17

13. National Assessment of Educational Progress for age 13, by subject and by selected characteristics of participants: United States, 1975–82 18

14. National Assessment of Educational Progress for age 17, by subject and by selected characteristics of participants: United States, 1975–82 19

15. National Assessment of Educational Progress in science for ages 9, 13, and 17, by selected characteristics of participants: United States, 1972–73 and 1976–77 20

16. National Assessment of Educational Progress in mathematics for ages 9, 13, and 17, by selected characteristics of participants: United States, 1977–78 and 1981–82 21

17. National Assessment of Educational Progress in music for ages 9, 13, and 17, by selected characteristics of participants: United States, 1971–72 and 1978–79 22

18. National Assessment of Educational Progress in art for ages 9, 13, and 17, by selected characteristics of participants: United States, 1974–75 and 1978–79 23

19. National Assessment of Educational Progress in reading for ages 9, 13, 17, by selected characteristics of participants: United States, 1974–75 and 1979–80 24

II. Elementary and Secondary Education

Enrollment

20. Enrollment in public elementary and secondary schools, by level and by State: Fall 1981 and fall 1982 26

Page

21. Historical summary of public elementary and secondary school statistics: United States, 1869–70 to 1979–80 27

22. Enrollment by grade in public elementary and secondary schools: United States, fall 1970 to fall 1981 31

23. Membership, attendance, and length of school term in public elementary and secondary schools, by State: 1980–81 32

24. Enrollment in public schools with elementary grades only, by grade span and by State: Fall 1980 33

25. Enrollment in public schools with secondary grades only, by grade span and by State: Fall 1980 34

26. Enrollment in public schools with both elementary and secondary grades, by grade span and by State: Fall 1980 35

27. Ages for compulsory and permissive school attendance and for admission to the first grade, by State: 1978 36

28. Selected statistics on the transportation of public school pupils, by State: 1979–80 37

29. Number and percent of public school pupils transported at public expense, and current expenditures for transportation: United States, 1929–30 to 1980–81 40

30. Enrollment in special education programs in public elementary and secondary schools, by amount of participation and by type of handicap: United States, fall 1980 40

31. Enrollment in public elementary and secondary schools, by race or ethnicity and by State: Fall 1980 41

Page

32. Enrollment in grades 9–12 in public and private schools compared with population 14–17 years of age: United States, 1889–90 to fall 1981 42

33. Enrollment of 3-, 4-, and 5-year-old children in preprimary programs, by age and by type of program: United States, October 1979 and October 1980 43

34. Number of students enrolled in various subject areas compared with total enrollment in grades 7–12 of public secondary schools: United States, 1948–49, 1960–61, and 1972–73 43

35. Enrollment in foreign languages compared with total enrollment in grades 9–12 of public secondary schools: United States, fall 1965 to fall 1978 44

36. Enrollment, average daily attendance, and classroom teachers in public elementary and secondary schools, by State: 1981–82 45

37. Enrollment in private elementary and secondary schools, by affiliation of school and by State: Fall 1980 46

38. Summary statistics on private schools, by type of school: United States, 1976–77 to 1980–81 47

39. Summary statistics on Catholic elementary and secondary schools: United States, 1919–20 to 1982–83 47

Teachers and Other Instructional Staff

40. Classroom teachers and pupils per teacher in private elementary and secondary schools, by affiliation of school and by State; Fall 1980 ... 48

41. Instructional staff employed in public elementary and secondary schools, by type of assignment and by State: Fall 1981–82 49

42. Staff employed in public school systems, by type of assignment and by State: Fall 1981–82 50

Page

43. Selected characteristics of public school teachers: United States, spring 1961 to spring 1981 51

44. Public secondary school teachers, by subject taught: United States, spring 1961 to spring 1981 54

45. Estimated average annual salary of classroom teachers in public elementary and secondary schools: United States, 1959–60 to 1981–82 54

46. Average annual salary of instructional staff in public elementary and secondary schools, and average annual earnings of full-time employees in all industries, United States, 1929–30 to 1981–82 55

47. Average annual salary of instructional staff in public elementary and secondary schools, by State: 1939–40 to 1981–82 56

Schools and School Districts

48. Number of local basic administrative units (school districts), by State: Fall 1981 and fall 1982 57

49. Selected statistics for the 120 largest public school systems: 1981–82 58

50. Number of public school systems and number of pupils enrolled, by size of system: United States, fall 1981 62

51. Number of local basic administrative units (school districts) and number of public and private elementary and secondary schools: United States, 1929–30 to 1980–81 62

52. Number of public schools with elementary grades only, by grade span and by State: 1980–81 63

53. Number of public schools with secondary grades only, by grade span and by State: 1980–81 66

Page

54. Number of public schools with both elementary and secondary grades, by grade span and by State: 1980–81 67

55. Number of public elementary and secondary schools, by type of school: United States, 1970–71 to 1980–81 68

High School Seniors, Graduates, and Dropouts

56. Number of high school graduates compared with population 17 years of age: United States, 1869–70 to 1980–81 68

57. Public high school graduates by sex and by State: 1980–81 69

58. Private high school graduates, by affiliation of school and by State: 1979–80 70

59. Percent of high school dropouts among persons 14 to 34 years old, by age, race, and sex: United States, October 1971 and October 1981 71

60. Scholastic Aptitude Test score averages for college-bound high school seniors, by sex: United States, 1966–67 to 1981–82 71

61. Selected statistics on the educational experiences and extracurricular activities of high school seniors: United States, spring 1980 72

Income and Expenditures

62. Revenue receipts of public elementary and secondary schools from Federal, State, and local sources: United States, 1919–20 to 1980–81 77

63. Revenue and nonrevenue receipts of public elementary and secondary schools, by source and by State: 1980–81 78

64. Summary of expenditures for public elementary and secondary education, by purpose and by State: 1980–81 79

Page

65. Estimated expenditures for public elementary and secondary education, by purpose and by State: 1981–82 80

66. Summary of expenditures for public elementary and secondary education, by purpose: United States, 1919–20 to 1979–80 81

67. Personal income, 1980, related to expenditures for public schools, by State: 1980–81 82

68. Expenditure per pupil in average daily attendance in public elementary and secondary schools, by State: 1980–81 83

69. Total and current expenditure per pupil in average daily attendance in public elementary and secondary schools: United States, 1929–30 to 1981–82 84

III. College and University Education

Enrollment

70. Total enrollment in institutions of higher education, by attendance status, sex of student, control of institution, and State: Fall 1981 86

71. Total enrollment in institutions of higher education, by level of enrollment and by State: Fall 1981 .. 87

72. Selected statistics for the 60 college and university campuses enrolling the largest number of students: United States, fall 1981 88

73. Residence and migration of all new students in institutions of higher education, by State: Fall 1981 90

74. Total enrollment in institutions of higher education, by control of institution, sex, level of enrollment, and attendance status: United States, fall 1981 91

75. Total enrollment in institutions of higher education, by type and control of institution: United States, fall 1977 to fall 1982 92

Page

76. Total enrollment in institutions of higher education, by type of program and by control of institution: United States, fall 1978 to fall 1982 92

77. Total enrollment in institutions of higher education, by attendance status, sex of student, and control of institution: United States, fall 1963 to fall 1982 93

78. Graduate enrollment in institutions of higher education, by attendance status, sex of student, and control of institution: United States, fall 1969 to fall 1982 93

79. Full-time equivalent enrollment in institutions of higher education, by type and control of institution: United States, fall 1970 to fall 1981 94

80. Percent of the high school class of 1972 participating in post-secondary education, by race, socioeconomic status, and ability level: United States, fall 1972 to fall 1979 94

81. Total enrollment in institutions of higher education in selected major fields of study, by level, sex, and attendance status: United States and outlying areas, fall 1980 95

82. Total enrollment in institutions of higher education in selected major fields of study, by sex: United States, fall 1978 and 1980 96

83. Enrollment of persons 14 to 34 years of age in institutions of higher education, by major field of study: United States, October 1966, 1972, and 1978 97

84. Selected characteristics of college students 14 to 34 years of age: United States, October 1981 97

85. Selected statistics on traditionally black institutions of higher education: United States, 1981 99

Page

86. Total enrollment in institutions of higher education, by racial/ethnic category, sex, and control of institution: United States, fall 1978 and 1980 100

87. Total enrollment in institutions of higher education, by racial/ethnic category and by type and control of institution: United States, fall 1980 100

88. Historical summary of faculty, students, degrees, and finances in institutions of higher education: United States, 1869–70 to 1980–81 101

89. Number of 2-year institutions of higher education, by control, and their enrollment, by control and by sex: United States, fall 1963 to fall 1981 102

Faculty and Other Professional Staff

90. Employees in institutions of higher education, by manpower resource category, sex, and employment status: United States, fall 1976 102

91. Full-time and part-time instructional staff in institutions of higher education, by academic rank: United States, fall 1960 to fall 1982 103

92. Number and average salary of full-time instructional faculty on 9- and 12-month contracts in institutions of higher education, by academic rank and by sex: United States, 1980–81 and 1981–82 103

Institutions

93. Institutions of higher education and branches, by type, control, and size of enrollment: United States, fall 1981 104

94. Number of institutions of higher education and branches, by control of institution, highest level of offering, and sex of student body: United States, 1981–82 105

Page

95. Number of institutions of higher education and branches, by control of institution and by State: 1981–82 107

96. Number of institutions of higher education and branches, by type, control, and State: 1982–83 108

97. Number of institutions of higher education, by control and type of institution: United States, 1965–66 to 1982–83 110

98. Number of institutions of higher education that have closed their doors, by control and type of institution: United States, 1960–61 to 1981–82 111

Degrees

99. Earned degrees conferred by institutions of higher education, by level of degree and by State: 1979–80 and 1980–81 112

100. Bachelor's, master's, and doctor's degrees conferred by institutions of higher education, by sex of student and by field of study: United States, 1980–81 113

101. Bachelor's degrees conferred by institutions of higher education, by racial/ethnic group, major field of study, and sex of student: United States, 1980–81 120

102. Master's degrees conferred by institutions of higher education, by racial/ethnic group, major field of study, and sex of student: United States, 1980–81 122

103. Doctor's degrees conferred by institutions of higher education, by racial/ethnic group, major field of study, and sex of student: United States, 1980–81 124

104. First-professional degrees conferred by institutions of higher education, by racial/ethnic group, major field of study, and sex of student: United States, 1980–81 .. 126

Page

105. First-professional degrees conferred by institutions of higher education, by sex of student, control of institution, and field of study: United States, 1980–81 127

106. Number of first-professional degrees conferred in dentistry, medicine, and law, by sex: United States, 1949–50 to 1980–81 128

107. Earned degrees in mathematics conferred by institutions of higher education, by level of degree and by sex of student: United States, 1949–50 to 1980–81 129

108. Earned degrees in chemistry conferred by institutions of higher education, by level of degree and by sex of student: United States, 1949–50 to 1980–81 129

109. Earned degrees in physics conferred by institutions of higher education, by level of degree and by sex of student: United States, 1949–50 to 1980–81 130

110. Earned degrees in the physical sciences conferred by institutions of higher education, by level of degree and by sex of student: United States, 1951–52 to 1980–81 130

111. Earned degrees in the biological sciences conferred by institutions of higher education, by level of degree and by sex of student: United States, 1951–52 to 1980–81 131

112. Earned degrees in engineering conferred by institutions of higher education, by level of degree and by sex of student: United States, 1949–50 to 1980–81 131

113. Earned degrees in computer and information sciences conferred by institutions of higher education, by level of degree and by sex of student: United States, 1970–71 to 1980–81 132

Page

114. Earned degrees conferred by institutions of higher education, by level of degree: United States, 1869–70 to 1980–81 132

115. Statistical profile of persons receiving doctor's degrees, by field of study: United States, 1980–81. 133

116. Doctor's degrees conferred by 61 large institutions of higher education: 1971–72 to 1980–81 134

117. Associate degrees and awards based on occupational curriculums, by length and type of curriculum and by sex of recipient: United States, 1980–81 135

118. Associate degrees conferred by institutions of higher education, by type of curriculum: United States, 1973–74 to 1980–81 137

Income

119. Current-fund revenue of institutions of higher education, by control of institution and source of revenue: United States, 1980–81. 137

120. Current-fund revenue of institutions of higher education, by control of institution and by State: 1979–80 and 1980–81 138

121. Income of institutions of higher education: United States, 1919–20 to 1980–81 139

122. Current-fund revenue received from the Federal Government, by the 100 institutions of higher education receiving the largest amounts: United States, 1980–81 140

Student Charges, Financial Aid, and Costs per Student

123. Estimated undergraduate tuition and fees and room and board rates in institutions of higher education, by type and control of institution: United States, 1974–75 to 1983–84 141

Page

124. Estimated average annual tuition and fees and room and board rates, in institutions of higher education, by control of institution and by State: 1981–82 142

125. Scholarship and fellowship awards of institutions of higher education, by control of institution: United States, 1975–76 to 1980–81 143

Expenditures

126. Expenditures of institutions of higher education: United States, 1929–30 to 1973–74 143

127. Expenditures of institutions of higher education: United States, 1975–76 to 1980–81 144

128. Current-fund expenditures and mandatory transfers of institutions of higher education, by control and by purpose: United States, 1980–81 145

129. Current-fund expenditures of institutions of higher education, by control and by State: 1979–80 and 1980–81 146

130. Personal income, 1980, related to higher education current-fund revenues from State and local governments, by State: 1980–81 . 147

131. Current-fund expenditures per full-time equivalent student in institutions of higher education, by type and control of institution, and by purpose of expenditure: United States, 1980–81 148

Property

132. Physical plant value and endowment funds per student in institutions of higher education, by control and by level: United States, 1975–76 to 1980–81 149

133. Endowment funds of the 100 institutions of higher education with the largest amounts: United States, fiscal year 1981 151

Page

134. Value of property and liabilities of institutions of higher education: United States, 1919–20 to 1980–81 153

IV. Adult and Vocational Education

Adult Education

135. Selected characteristics of participants in adult education: United States, 1981 156

136. Number of courses taken by participants in adult education, by sex, age, and by field of study: United States, year ending May 1981 158

137. Participants in adult basic and secondary education programs, by sex, age, racial/ethnic group, and State: Fiscal year 1980 159

Vocational Education

138. Number of secondary and postsecondary institutions offering vocational education programs, by type of institution and by State: 1978–79 160

139. Enrollment, mean charges, and mean number of hours required to complete program in noncollegiate noncorrespondence postsecondary schools offering occupational programs, by control of school, for selected program offerings: United States and outlying areas, 1980–81 161

140. Enrollment in noncollegiate noncorrespondence postsecondary schools with occupational programs, by type of school: United States and outlying areas, 1975 to 1981 162

141. Number of postsecondary schools with occupational programs, by type and control of school: United States, 1982 162

Page

142. Number and employment status of staff members in noncollegiate noncorrespondence postsecondary schools offering occupational programs, by type and control of school: United States and outlying areas, 1980–81 163

V. Federal Programs for Education and Related Activities

143. Federal funds for education, by agency: Fiscal years 1979 to 1982 173

144. Federal funds obligated for major programs administered by the Department of Education: Fiscal years 1980 to 1985 174

145. Federal funds obligated by the Department of Education, by major program area and by State: Fiscal year 1982 176

146. Revenue receipts of public elementary and secondary schools from all sources compared with revenues from the Federal Government, by program and by State: 1980–81 177

147. Federal obligations to universities and colleges, by agency and State: Fiscal year 1981 178

148. Summary of Federal funds for research, development, and R&D plant: Fiscal years 1981, 1982, and 1983 179

149. Federal funds obligated by the Department of Agriculture for child nutrition and special milk programs, by State: Fiscal year 1982 181

INTRODUCTION

A STATISTICAL LOOK AT AMERICAN EDUCATION: 1982–83

In the fall of 1982, education was the primary activity of approximately 60.8 million Americans. Included in the total were an estimated 57.2 million students enrolled in our schools and colleges, 3.3 million teachers, and about 300,000 superintendents, principals, supervisors, and other instructional staff members. This means that in a nation with approximately 232 million people, more than 1 out of every 4 persons was directly involved in the educational process.

Total enrollment in elementary and secondary schools and colleges and universities reached an all-time high of 61.3 million in the fall of 1975. For more than a decade, small annual decreases have occurred at the elementary school level, reflecting the continuing decline in the number of children 5 to 13 years old. Enrollment in the high school grades peaked in the fall of 1976, while college enrollment in most recent years has continued to rise.

It is estimated that the following percentages of the school-age population were enrolled in school (excluding nursery school) in the fall of 1982: Of 5-year-olds (the usual kindergarten age), 90 percent; of 6- to 13-year-olds (grades 1 through 8), 99 percent; of 14- to 17-year-olds (grades 9 through 12), 94 percent; and of 18- to 24-year-olds (college age), 30 percent. These estimates are derived from data obtained in the annual fall surveys of the U.S. Department of Commerce, Bureau of the Census, and reported in *Current Population Reports*, Series P–20.

Data from the fall survey of enrollment in higher education indicate that about 12,426,000 students were enrolled in colleges and universities in the fall of 1982. This means that college enrollment reached another all-time high even though the increase over 1981 was less than one-half of one percent.

Enrollment in the fall of 1982 in public and private schools at the secondary level (grades 9 through 12) is estimated at about 13.9 million. This is a decrease of about 2.9 percent from the 14.3 million students enrolled a year earlier. Most of the decrease is believed to have occurred in public schools. Enrollment in private schools declined slightly to an estimated 1.3 million in 1982.

Between the fall of 1981 and 1982, enrollment at the elementary school level (kindergarten through grade 8) declined by less than 1 percent, from an estimated 31.1 to 30.9 million. Private school enrollment remained at about 3.6 million, while public schools experienced a decrease estimated at about 126,000 pupils.

School enrollment is significantly influenced by trends in the birth rate. Data from the National Center for Health Statistics, U.S. Public Health Service, show that the number of live births in this country attained an all-time high of 4.3 million in 1961. They then declined precipitously for more than a decade. From 1973 through 1976 the annual number of births was between 3.1 and 3.2 million, but the birth rate turned upward again in 1977. Subsequently, there have been annual increases that have raised the number of children born from 3.3 million in 1977 to more than 3.7 million in 1982.

The latest projections of the National Center for Education Statistics indicate that small reductions in elementary school enrollment will continue for the next year or so. These decreases are directly attributable to the expected decline during this period in the number of children aged 5 to 13. Enrollment in the elementary grades should start to rise again in the mid-1980's as the children born in the recent past reach school age. The small annual decreases in high school enrollment, which began in 1977, are expected to continue throughout most of the 1980's. College enrollment appears to have reached its peak at this time. The college-age population (18- to 24-year-olds) is expected to decline for a number of years after peaking in 1981, and emerging trends in college attendance rates will determine what hap-

pens to higher education enrollment during the rest of this decade. In recent years, the increased attendance of women, older students (those 25 years old and over), and part-time students has played a major role in maintaining college enrollment at a high level.

An estimated 2.4 million persons were employed as classroom teachers in public and private elementary and secondary schools in the fall of 1982. This was slightly less than the number of persons teaching a year earlier. Only minimal changes occurred at the elementary and the secondary levels. The number of public school teachers in 1982 was estimated at 2,120,000, and about 280,000 were in private schools. Approximately 1,360,000 were teaching in elementary schools, and the remaining 1,040,000 were employed at the secondary level.

Overall, the trend in most recent years has been for the number of public school teachers to remain relatively stable, while enrollment has been declining. The result has been a continuing improvement in the pupil-teacher ratio. In the fall of 1981 there were 18.9 pupils per teacher compared with 22.3 pupils for each teacher 10 years earlier. Moreover, a recent study by the National Education Association [1] indicates that many of the public school teachers in the 1980's have spent more years in preparing for a teacher career than those who taught in previous decades. Fewer than 1 percent of the teachers in 1981 did not have a bachelor's degree, compared with 15 percent in 1961. In 1981, about 50 percent of the teachers held a master's or higher degree, compared with 23.5 percent 20 years earlier.

The average annual salary of classroom teachers in public elementary and secondary schools rose 8.8 percent last year over the preceding year, bringing the average salary in 1981–82 to approximately $19,140. A further increase to about $20,500 is anticipated for the current school year. The average salary of the total professional instructional staff, including principals, supervisors, teachers, and other personnel, is somewhat larger—the estimates for 1981–82 and 1982–83 are $20,110 and $21,500, respectively. For several years prior to 1981–82, the rise in salaries had failed to keep pace with the rapid acceleration in the cost of living as measured by the Bureau of Labor Statistics' Consumer Price Index.

The number of instructional staff members in colleges and universities has continued to grow, but at a slower rate than in the middle and late 1960's. The full-time and part-time teaching staff, including graduate assistants, is estimated at about 870,000 in the fall of 1982, an increase of 5,000 over 1981. During the past decade, while college enrollment was growing by 35 percent, the number of instructional staff members increased by an estimated 47 percent.

The average salary of full-time instructional faculty in institutions of higher education was about $25,450 for the 1981–82 academic year, an increase of about 9.2 percent over the previous year. A further increase to about $27,000 is expected for the 1982–83 school year. These salary figures are based upon 9-month teaching contracts. They do not include income from teaching in summer school or from other paid employment.

The largest high school graduating class was in school year 1976–77, when 3,161,000 persons received their diplomas. The number of graduates in 1982–83 is expected to exceed 2,800,000, down more than 5 percent from the number who graduated in 1980–81. The large number of graduates in the recent past reflects the high birth rate in the late 1950's and early 1960's as well as the tendency of most young Americans to remain in school at least until high school graduation. About three-fourths of the young people today graduate from high school, and about 47 percent (more than 60 percent of the high school graduates) can be expected to enter a degree-credit program in a college or university. If present trends continue, about 24 percent of persons in their late teens today can be expected to earn a bachelor's degree; 8 percent, a master's degree; and nearly 1 percent, a doctorate.

In a survey of the educational attainment of the population conducted in March 1979,[2] the Bureau of the Census found that the median number of school years completed by young adults 25 to 29 years of age was 12.9 years. Persons 45 to 49 had completed 12.5 years, while senior citizens 75

[1] National Education Association, *Status of the American Public School Teacher, 1980–81*.

[2] U.S. Department of Commerce, Bureau of the Census, *Current Population Reports*, Series P–20, No. 356.

years old and over had spent 8.8 years in school. These figures indicate the tendency of each generation to spend more years in school than the generation that precedes it.

During the 1980–81 school year, the number of earned degrees conferred by colleges and universities was as follows: bachelor's degrees, 935,000; first-professional degrees, 72,000; master's degrees, 296,000; and doctorates, 33,000. Except for doctor's degrees, which have stabilized, the number of degrees conferred at each level is expected to be somewhat higher in 1982–83 than in the previous year, and a further increase is projected for 1983–84.

Expenditures for public and private education from kindergarten through graduate school reached $186.5 billion for the 1980–81 school year, and preliminary estimates indicate that the 1982–83 figure will exceed $215 billion. The expenditures of elementary and secondary schools are expected to total about $133 billion this year, while institutions of higher education will spend more then $82 billion. Public schools and colleges are expected to spend about $172 billion in 1982–83, compared with about $43 billion for private institutions.

Viewed in another context, the total expenditures for education during 1982–83 are expected to amount to about 7 percent of the gross national product (GNP). The percentage of the GNP spent for education was in a rising trend for many years before peaking at 7.8 percent in 1975–76.

Nationally, the current expenditure per pupil in average daily attendance in public elementary and secondary schools was 2.7 times as large in 1981–82 as it was 10 years earlier. The rise was from $990 in 1971–72 to about $2,670 in 1981–82. However, in dollars adjusted for changes in the Consumer Price Index, the increase was 17.9 percent. The current expenditure per pupil in 1982–83 is expected to reach $2,900.[3]

The statistics in this introduction provide a quantitative description of the current American educational scene. Quality in education is much more difficult to assess. It is clear, however, from the large number of participants, the number of years that people spend in school, and the vast sums expended by educational institutions that the American people have a high regard for learning. Hence, the current emphasis on excellence in education is likely to attract a responsive audience.

The statistics in this publication are derived from surveys of the National Center for Education Statistics as well as from surveys conducted by other agencies, both governmental and nongovernmental. It should be kept in mind that all survey results are subject to reporting and processing errors and errors due to nonresponse. For many surveys, these types of errors are kept to a minimum by methods built into the survey procedures. However, in some cases they may have a significant impact on survey results.

Some of the statistics presented in this report are based on sample surveys. The results from these surveys will differ somewhat from figures which would have been obtained if a complete census had been taken using the same instrument.

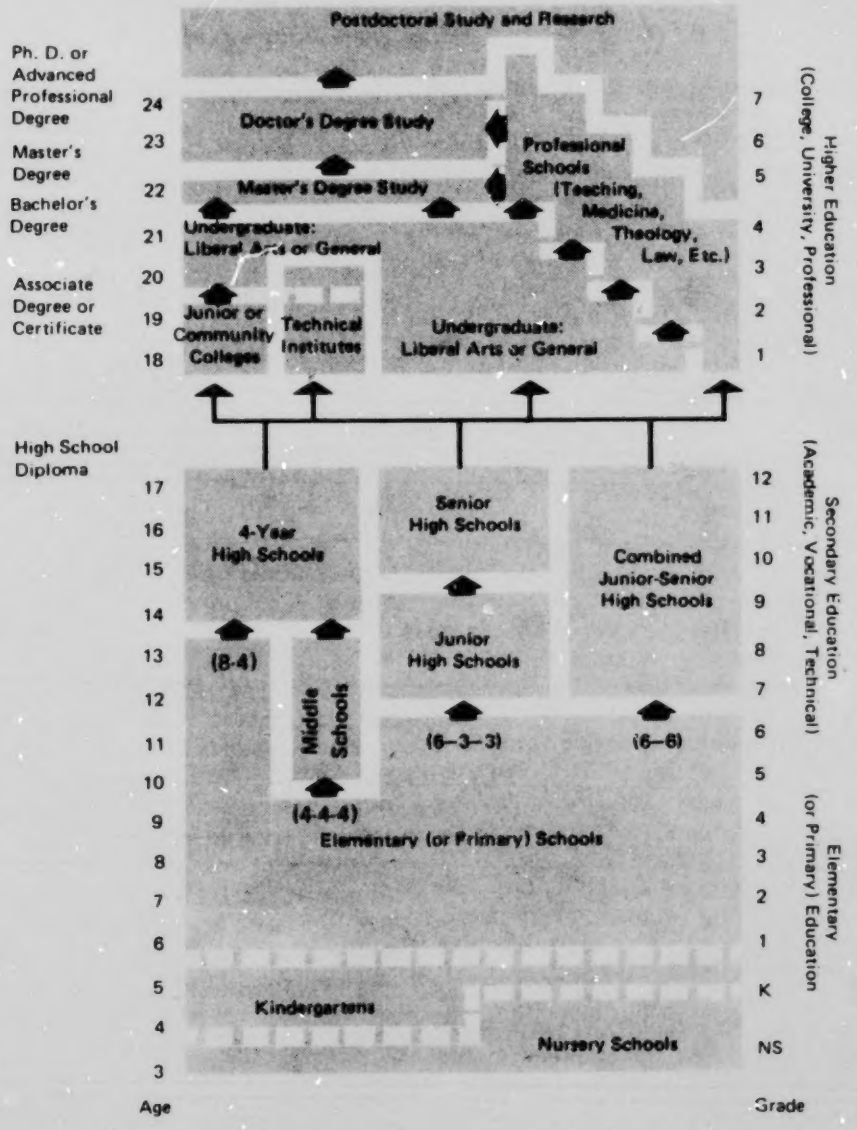
In reports detailing the results of sample surveys, standard errors are routinely provided. A standard error measures the variations that occur by chance because a sample rather than the entire population is surveyed. The chances are more than 95 out of 100 that an estimate from a random sample would not differ from an estimate derived from a complete census by more than twice the standard error.

Because the sampling and nonsampling errors attributable to the statistics in this report affect their intended use, readers are encouraged to consult original sources, which are indicated at the end of each table. Assistance in obtaining and interpreting these sources may be obtained from the *Digest* staff.

In addition to survey results, this publication also contains numerous estimates. Since many key education statistics are not available from any survey, or are outdated, the *Digest* staff has prepared a large number of estimates especially for this volume. Such estimates are either explained in footnotes to the tables or are noted as "estimated by the National Center for Education Statistics." A detailed presentation of estimation methodology has not been included in this "abstract" type of publication. Documentation for specific estimation procedures is available from the authors.

[3] The expenditure figures cited in the preceding paragraphs are in current dollars; that is, they have not been adjusted for charges in the purchasing power of the dollar over time.

Figure 1.–The structure of education in the United States



NOTE.–Adult education programs, while not separately delineated above, may provide instruction at the elementary, secondary, or higher education level.

CHAPTER I

ALL LEVELS OF EDUCATION

The purpose of this chapter is to provide a broad overview of education in the United States from prekindergarten through graduate school. It brings together materials from elementary, secondary, and higher education to present a composite picture of the American educational system. It contains tables which show the total number of persons enrolled in school, the number of teachers, the number of schools, and total receipts and expenditures for education at all levels. Statistics on educational attainment, on illiteracy, and on school retention rates are also included. The final tables in this chapter were derived from the National Assessment of Educational Progress. They provide summary data of the achievements of 9-year-olds, 13-year-olds, 17-year-olds, and young adults in a variety of areas, including science, citizenship, reading, literature, music, art, social studies, and mathematics.

Figure 1 provides a graphic presentation of the structure of education in the United States. The right side of the chart indicates the three levels of education (elementary, secondary, and higher); the left gives the approximate age of persons at each level. As the chart indicates, pupils ordinarily spend from 6 to 8 years in the elementary grades, followed by 4 to 6 years of high school. The entire 12-year program is normally completed at age 17 or 18 years.

High school graduates may enter a junior college, a technical institution, a 4-year college or university, or a professional school. A junior college normally offers the first 2 years of a standard 4-year college program and a broad selection of terminal-vocational courses. Academic courses completed at a junior college are transferable for credit to 4-year colleges and universities. A technical institute offers postsecondary technical training not leading to a bachelor's or higher degree.

An associate degree requires at least 2 years of college-level work, and a bachelor's degree normally can be earned in 4 years. At least 1 year beyond the bachelor's is necessary for a master's degree, while a doctor's degree usually requires a minimum of 3 or 4 years beyond the baccalaureate.

Professional schools differ widely in requirements for admission and in length of programs. Medical students, for example, must complete at least 3 years of premedical studies at a college or university before they can enter the 4-year program at a medical school. Engineering students, on the other hand, can enter an engineering school immediately upon completion of a secondary school program.

Many of the statistics in this chapter are derived from the annual and biennial surveys of the National Center for Education Statistics. When necessary, these survey data have been supplemented by estimates prepared especially for this volume in order to make the tables as useful as possible. In addition, substantial contributions have been made by other agencies, both governmental and nongovernmental, as indicated in the source notes in the appropriate tables. The data obtained from the Bureau of the Census surveys of educational attainment, governmental finances, and school enrollment by age, race, and sex are worthy of special mention for the valuable information they provide.

Table 1.—Estimated enrollment in educational institutions, by level of instruction and by type of control: United States, fall 1981 and fall 1982 [1]

Level of instruction and type of control	Fall 1981	Fall 1982
1	2	3
Total elementary, secondary, and higher education	**57,745,045**	**57,244,256**
Public	50,010,405	49,554,563
Private	7,734,640	7,689,693
Kindergarten–grade 12 (regular and other schools)[2]	45,373,373	44,818,476
Regular public schools	40,148,373	39,643,476
Regular private schools	4,950,000	4,900,000
Other public schools	215,000	215,000
Other private schools	60,000	60,000
Kindergarten–grade 8 (regular and other schools)[2]	31,069,119	30,922,803
Regular public schools	27,269,119	27,142,803
Regular private schools	3,620,000	3,600,000
Other public schools	155,000	155,000
Other private schools	25,000	25,000
Grades 9–12 (regular and other schools)[2]	14,304,254	13,895,673
Regular public schools	12,879,254	12,500,673
Regular private schools	1,330,000	1,300,000
Other public schools	60,000	60,000
Other private schools	35,000	35,000
Higher education (total enrollment in colleges, universities, professional schools, teachers colleges, and junior colleges)	12,371,672	12,425,780
Public	9,647,032	9,696,087
Private	2,724,640	2,729,693

[1] The 1981 figures for private and "other" elementary and secondary schools, and all of the elementary and secondary data for 1982, are estimates. The estimates are derived from changes in the school-age population combined with long-range trends in school enrollment rates.

[2] "Regular" schools include schools which are a part of State and local school systems and also most non-profitmaking private elementary and secondary schools, both church affiliated and nonsectarian. "Other" schools include subcollegiate departments of institutions of higher education, residential schools for exceptional children, Federal schools for Indians, and Federal schools on military posts and other Federal installations.

NOTE.—Fall enrollment is usually smaller than school-year enrollment, since the latter is a cumulative figure that includes students who enroll at any time during the year.

SOURCES: U.S. Department of Education, National Center for Education Statistics, *Statistics of Public Elementary and Secondary School Systems, Fall 1981 (forthcoming); Fall Enrollment in Colleges and Universities* (forthcoming 1981 and 1982 editions); and estimates of the National Center for Education Statistics.

Table 6.—Estimated number of classroom teachers in elementary and secondary schools, and total instructional staff in institutions of higher education: United States, fall 1981 and fall 1982 [1]

Level of instruction and type of control	Fall 1981	Fall 1982
1	2	3
Total elementary, secondary, and higher education	**3,286,000**	**3,274,000**
Public	2,772,000	2,761,000
Private	514,000	513,000
Elementary and secondary classroom teachers (regular and other schools) [2]	2,421,000	2,404,000
Regular public schools	2,125,000	2,110,000
Regular private schools	277,000	275,000
Other public schools	14,000	14,000
Other private schools	5,000	5,000
Elementary classroom teachers (regular and other schools) [2]	1,370,000	1,364,000
Regular public schools	1,170,000	1,165,000
Regular private schools	188,000	187,000
Other public schools	10,000	10,000
Other private schools	2,000	2,000
Secondary classroom teachers (regular and other schools) [2]	1,051,000	1,040,000
Regular public schools	955,000	945,000
Regular private schools	89,000	88,000
Other public schools	4,000	4,000
Other private schools	3,000	3,000
Higher education instructional staff [3]	865,000	870,000
Public	633,000	637,000
Private	232,000	233,000

[1] The 1981 figures for private and "other" elementary and secondary schools and for institutions of higher education, and all 1982 figures, are estimates. The distribution of elementary and secondary schools teachers by level is also estimated. The estimates are derived from expected enrollment changes combined with the long-range trend in pupil-teacher and student-teacher ratios.

[2] "Regular" schools include schools which are a part of State and local school systems and also most non-profitmaking private elementary and secondary schools, both church affiliated and nonsectarian. "Other" schools include subcollegiate departments of institutions of higher education, residential schools for exceptional children, Federal schools for Indians, and Federal schools on military posts and other Federal installations. Teachers are reported in terms of full-time equivalents.

[3] Includes full-time and part-time staff with rank of instructor or above, and junior staff, such as graduate assistants, who provide instruction in colleges, universities, and professional schools.

SOURCE: U.S. Department of Education, National Center for Education Statistics, surveys and estimates.

[1] Estimates based on retrojection of 1940 census data on education by age.

[2] Persons of Spanish origin are included, as appropriate, in the "white" or in the "black and other races" category.

NOTE.—Prior to 1950, data exclude Alaska and Hawaii. Data for 1975 and subsequent years are for the noninstitutional population.

SOURCES: U.S. Department of Commerce, Bureau of the Census, *1960 Census of Population*, Vol. 1, Part 1; *Current Population Reports*, Series P-20; Series P-19, No. 4; 1960 Census Monograph, *Education of the American Population*, by John K. Folger and Charles B. Nam; and unpublished data.

[1] The mean delta ρ is a single number used in National Assessment to describe a group's performance. The percent correct, or the ρ, for an exercise (test item) can be expressed for the Nation as a whole or for any of the National Assessment groups. The difference between these percentages is the delta ρ for the exercise. The mean delta ρ for a group is the mean of all delta ρ's for the group.

NOTE.—Data are for the following years: 1975–76—Citizenship, social studies; 1976–77—Science; 1978–79—Music, art; 1979–80—Reading/literature comprehension; 1981–82—Mathematics.

SOURCE: Derived from data available in the files of the National Assessment of Educational Progress, July 1983.

[1] The mean delta ρ is a single number used in National Assessment to describe a group's performance. The percent correct, or the ρ, for an exercise (test item) can be expressed for the Nation as a whole or for any of the National Assessment groups. The difference between these percentages is the delta ρ for the exercise. The mean delta ρ for a group is the mean of all delta ρ's for the group.

NOTE.—Data are for the following years: 1975–76—Citizenship, social studies; 1976–77—Science; 1978–79—Music, art; 1979–80—Reading/literature comprehension; 1981–82—Mathematics.

CHAPTER II

Elementary and Secondary Education

The National Center for Education Statistics obtains statistics each fall from the State departments of education on the pupils, staff, and graduates of public schools. These data have been published annually in a series of reports entitled *Statistics of Public Elementary and Secondary School Systems.* Another annual study based upon information from State departments of education is entitled *Revenues and Expenditures for Public Elementary and Secondary Education.* This report provides data on public school revenues by source and on expenditures by purpose.

For many years this office published comprehensive statistics on the organization, staff, pupils, and finances of public schools in the biennial report, *Statistics of State School Systems.* This publication was discontinued after 1975–76, but it is still cited in many of the historical tables in this chapter.

To provide information on public education at the local level, the National Center for Education Statistics prepares a directory of local education agencies. This directory lists the name of each public school system, the city and county in which the superintendent's office is located, the grade span, the enrollment, and the number of schools in the system.

The National Center for Education Statistics has also conducted several surveys of private elementary and secondary schools in recent years. The latest data on the enrollment and teachers in private schools are for the 1980–81 school year, while the statistics on high school graduates are for the previous year. Additional information on private schools has been made available by the National Catholic Educational Association.

Other recurring reports of the National Center for Education Statistics which have appeared from time to time are the studies of preprimary education and of offerings and enrollments in high school subjects. The most recent statistics in these areas are summarized in the tables which follow. This chapter of the *Digest* also utilizes data from the National Education Association on the characteristics, subjects taught, and average salaries of public school teachers; from the Office for Civil Rights, U.S. Department of Education, on public school enrollment in special education programs for the handicapped and on enrollment by race or ethnicity; and from the College Entrance Examination Board on the Scholastic Aptitude Test scores of college-bound high school seniors.

Table 20.—Enrollment in public elementary and secondary schools, by level and by State: Fall 1981 and fall 1982

State or other area	Fall 1981			Fall 1982

[1] Data on population and labor force are from the Bureau of the Census, and data on personal income and national income are from the Bureau of Economic Analysis, U.S. Department of Commerce.

[8] Fall enrollment.

[3] Data for 1870–71.

[4] Estimated by the National Center for Education Statistics.

[5] Prior to 1919–20, data are for the number of different persons employed rather than number of positions.

[6] Because of a modification of the scope of "current expenditures for elementary and secondary schools," data for 1959–60 and later years are not entirely comparable with data for prior years.

[7] Includes summer schools, community colleges, and adult education. Beginning in 1959–60, also includes community services, formerly classified with "current expenditures for elementary and secondary schools."

[8] Excludes community colleges and adult education.

[9] Includes supervisors, principals, teachers, and other nonsupervisory instructional staff.

[10] Estimated by the National Education Association.

[11] Excludes current expenditures not allocable to pupil costs.

[18] "A.D.A." means average daily attendance in elementary and secondary schools.

[13] Includes interest on school debt.

[14] The expenditure figure used here is the sum of current expenditures allocable to pupil costs, capital outlay, and interest on school debt.

[19] Per-day rates derived by dividing annual rates by average length of term.

NOTE.—Beginning in 1959–60, includes Alaska and Hawaii. Some of the figures for 1979–80 have been revised since originally published. Because of rounding, details may not add to totals.

Past and Projected Trends in Public School Enrollment

Public elementary and secondary school enrollment in the United States reached an all-time high of 46,081,000 in the fall of 1971. It then declined in each subsequent year for the next decade. By the fall of 1981, enrollment had reached 40,148,000. This decrease of 5,933,000 or 12.9 percent, may be attributed to a continuing decline in the number of 5- to 17-year-olds in the population.

Enrollment in the elementary grades (kindergarten through grade 8) peaked in the fall of 1969 and then decreased annually throughout the 1970s and early 1980s. Enrollment at the high school level (grades 9 through 12), on the other hand, did not reach its peak until the fall of 1976. It then declined each year through the fall of 1981.

Enrollment decreases tended to be quite modest in the early 1970s, but they began to accelerate later in the decade. This was especially true after 1976, when enrollment in both elementary and secondary schools was declining. The decrease from the previous year was less than 1 percent a year from 1972 through 1975. In contrast it was 2 percent a year or more in 1978, 1979, and 1981.

Projections of the National Center for Education Statistics indicate that public school enrollment should reach a low of about 39 million in the fall of 1984 before turning upward again. By 1990, assuming that there are annual increases in the school-age population after 1984 as expected, enrollment will probably exceed 41 million. In other words, enrollment in 1990 is expected to be fractionally higher then the 1980 figure of 40,987,000 pupils. The increases between 1985 and 1990 will be concentrated in the elementary grades. No sustained increase in high school enrollment is anticipated before the early 1990's.

As the accompanying chart indicates, there were significant differences among the states in public school enrollment trends between 1971 and 1981. In 8 states enrollment actually increased during the decade. In 4 states there was an enrollment decrease of less than 5 percent; in 12 states, a decrease of 5 to 9.9 percent; in 6 states, a decrease of 10 to 14.9 percent; in 9 states, a decrease of 15 to 19.9 percent; and 11 states and the District of Columbia, a decrease of 20 percent or more. The changes in enrollment ranged all the way from increases of 16.3 percent in Utah and 16.2 percent in Nevada to decreases of 29.6 percent in Delaware and 33.4 percent in the District of Columbia.

The movement of the population of the United States toward the South and the West is reflected in the school enrollment trends between 1971 and 1981. Most of the states with an enrollment increase during this period were in the West. Many of the states with a decrease of less than 10 percent were in the South. On the other hand, all of the states with a decrease of 15 percent or more were in the East and the Midwest.

[1] Includes a relatively small number of prekindergarten pupils.

[2] Figures in parentheses, shown in normal progression, indicate enrollment in successive grades of the pupils who entered the first grade in fall 1970, including retarded and accelerated pupils. Because of retardation, school retention rates should not be calculated directly from first-grade enrollment.

[3] Included in "elementary ungraded."

[4] Included in "secondary ungraded."

[5] Less than 0.05 percent.

NOTE.—Some of the data for 1978, 1979, and 1980 have been revised slightly since originally published. Because of rounding, details may not add to totals.

[1] During these years (inclusive) a child must attend school unless some approved basis for exemption exists.

[2] During these years (inclusive) a child may attend school on a tuition-free basis.

[3] Lower and upper levels established by the State Board of Education.

[4] Information updated in July 1983. The compulsory attendance regulations are being implemented gradually over a period of several years.

[5] 5 years and 7 months.

[1] Average daily attendance of public school pupils transported as a percentage of average daily attendance.

[2] Estimated by the National Center for Education Statistics based on 1979–80 data reported by States and prior years' responses.

NOTE.—Because of rounding, details may not add to total.

SOURCE: U.S. Department of Education, National Center for Education Statistics, survey of "Common Core of Data."

Pupil Transportation

Almost 21.5 million public school pupils rode buses to school during the 1979–80 school year. Public school buses traveled over 2.9 billion miles during the school year, or about 16.5 million miles every school day. Although public school enrollment declined 9.8 percent from fall 1971 to fall 1979 the number of pupils riding school buses increased by 10 percent during this period. In addition, approximately one million private school pupils were transported at public expense in 1979–80.

In 1979–80, 56.1 percent of public school pupils rode buses to school compared to 46.1 percent in 1971–72. This increase was caused by a number of factors: Some students were bused to promote racial integration; a number of school systems have expanded services to offer more convenience to their communities; neighborhood schools have been closed in some instances because of declining enrollments, necessitating the transportation of students to other schools. There has been a steady long-term increase in the percentage of students transported by bus since the data were first tabulated in 1929–30, in part due to the consolidation of small school systems.

Public schools spent more than $3.8 billion on transportation in the 1979–80 school year (excluding capital outlay for new buses and equipment). These expenditures have increased 21 percent since 1978–79 and 154 percent since 1971–72. On the average, the cost per bus mile was $1.31 in 1979–80. Transportation expenditures have taken an increasing share of the public school budget, from 3.6 percent of current expenditures in 1971–72 to 4.4 percent in 1979–80. The percentage of current expenditures that States spent on transportation in 1979–80 varied from lows of 1.6 percent in the District of Columbia and 1.7 percent in California to highs of 7.7 percent in North Dakota and 7.8 percent in West Virginia.

The average annual expenditure to transport a pupil also varied widely from State to State (see attached chart). These State annual expenditures differed for a number of reasons, such as variations in the cost of salaries and supplies. Perhaps the most important factor, however, was the relatively long distances that buses had to travel to bring children to school in many rural areas. Typically, Northwestern States with widely dispersed populations had to spend larger amounts per pupil to transport children to school, even when the actual cost per mile was lower than the national average. Southern States generally had lower expenditures per pupil, reflecting the lower cost of salaries and supplies

These figures are based on data collected by the National Center for Educaton Statistics from State education agencies. Additional information on pupil transportation appears in tables 28 and 29.

Figure 3.— Average annual expenditure per public school pupil transported, by state: 1979-80

[1] Data on enrollment by race/ethnicity were calculated independently and may not add across to the totals shown in column 2. Because of rounding, percents may not add to 100.0.

[2] Excludes persons of Hispanic origin.

[3] Less than 0.05 percent.

NOTE.—The above tabulation excludes approximately 1,152,000 pupils not reported by race or ethnicity.

SOURCE: U.S. Department of Education, Office for Civil Rights, data from the 1980 State Summaries of Elementary and Secondary School Civil Rights Survey.

Table 32.—Enrollment in grades 9–12 in public and private schools compared with population 14–17 years of age: United States, 1889–90 to fall 1981

School year	Enrollment, grades 9–12 [1]			Population 14–17 years of age [2]	Total number enrolled per 100 persons 14–17 years of age

[1] Unless otherwise indicated, includes enrollment in subcollegiate departments of institutions of higher education and in residential schools for exceptional children. Beginning in 1949–50, also includes Federal schools.

[2] Includes all persons residing in the United States, but excludes Armed Forces overseas. Data from the decennial censuses have been used when appropriate. Other figures are Bureau of the Census estimates as of July 1 preceding the opening of the school year.

[3] Excludes enrollment in subcollegiate departments of institutions of higher education and in residential schools for exceptional children.

[4] Data for 1927–28.

[5] Estimated.

[6] Preliminary data.

NOTE.—Beginning in 1959–60, includes Alaska and Hawaii. Some of the estimates of the population aged 14–17 have been revised slightly since originally published.

SOURCES: U.S. Department of Education, National Center for Education Statistics, *Statistics of State School Systems; Statistics of Public Elementary and Secondary School Systems; Statistics of Nonpublic Elementary and Secondary Schools;* and unpublished data.

Table 33.—Enrollment of 3-, 4-, and 5-year-old children in preprimary programs, by age and by type of program: United States, October 1979 and October 1980

[Numbers in thousands]

Enrollment status and type of program	October 1979				October 1980

Subject Fields of Public School Teachers

The Nation's public elementary and secondary schools employed approximately 2,170,000 teachers during the 1979–80 school year. The average school had 25 teachers, and for each teacher there was an average of 19 pupils. Typical classes were somewhat larger, since this ratio (1:19) includes music, art, and special education teachers as well as part-time teachers. Fifty-four percent or 1,163,100 of all public school teachers taught at the elementary level.

General elementary school teachers comprised the largest segment of the public school teachers. About 756,200, two-thirds of all elementary teachers, were general elementary school teachers (see attached chart). Special education teachers, the second largest group of elementary school teachers, numbered 126,800. Sixty percent of these special education teachers taught learning disabled and mentally retarded pupils. The next largest group consisted of preprimary teachers, numbering 75,300. Of the teachers who concentrated in a particular field, 51,400 taught English or reading; 49,600, music or art; 34,700, health and physical education.

Secondary teachers were considerably more specialized than elementary school teachers. The largest number of teachers, 152,400, taught English. The other traditional high school subjects also accounted for large numbers of teachers, with 117,600 in social studies, 115,000 in mathemetics, and 104,700 in science. A large number of teachers taught job-related skills. Vocational teachers numbered 83,200, and another 108,700 taught business, home economics, and industrial arts in nonvocational classes. Only 6 percent of the secondary teachers were special education teachers, compared to nearly 11 percent of teachers at the elementary level.

Over 96 percent of the school teachers were employed full-time, but part-time employment assumed more importance in certain fields. About 21 percent of the teachers for the visually handicapped, 17 percent of the teachers for the speech impaired, and 15 percent of the physics teachers worked part-time. Part-time teachers help to provide services and opportunities for students where a full-time teacher is not needed or cannot be found.

In most fields in 1979-80 there was a plentiful supply of new graduates prepared to teach, but in a few fields some shortages were reported. In particular, demand was relatively high for additional teachers in the fields of special education, the physical sciences, and the industrial arts.

In the mid-1980s the demand for new elementary school teachers should rise because of the increasing number of young children expected to enter school. For several years thereafter, the number of elementary school teachers can be expected to increase. Although decreases are projected for secondary school enrollments and teachers, shortages may occur in particular fields, especially mathematics and sciences.

These data are based upon a sample survey of public school administrators and are subject to the sampling errors inherent in a survey of this kind.

[1] Public school systems ranked by enrollment size.

[2] Current expenditures by local school districts only. Excludes expenditure of State education agencies for local school districts.

[3] Current expenditure per pupil based on fall enrollment. The United States average expenditure for this measure was $2,027 in 1979–80.

public school systems in 1981–82—Continued

Instructional staff, fall 1981	High school graduates, 1980–81	Number of schools, fall 1981	Current expenditures [1] for elementary and secondary schools, 1979–80 [In thousands of dollars]								Current expenditure per pupil, 1979–80 [1] (in dollars)

18 80

Grade Span and Enrollment Size of Public Schools

In this country in 1980–81, there were about 59,300 public schools with elementary grades only, 22,600 with secondary grades only, and 1,700 with both elementary and secondary grades. There was a great deal of variation in the grades encompassed by these schools and in the size of their enrollment. The paragraphs that follow provide some descriptive material on the grade span and enrollment size of public schools in the United States.

Among the schools with elementary grades only, three grade spans stood out. A large number of schools (22,800) began with prekindergarten or kindergarten and ended with grade 6, There were 6,000 middle schools, i.e., schools beginning with grades 4, 5, or 6, and ending with grades 6, 7, or 8. And there were 5,700 schools that began with prekindergarten or kindergarten and ended with grade 8. In addition, there were a smaller number of schools (3,200) that began with grade 1 and ended with grade 6 or 8. A very substantial number of elementary schools (21,600) did not fit into any of these familiar patterns.

Among schools with secondary grades only, the largest number (8,200) were 4-year high schools, beginning with grade 9 and ending with grade 12. There were 5,900 junior high schools (grade 7 to 8 or 7 to 9), 3,700 junior-senior high schools (grades 7 to 12), and 2,600 senior high schools (grades 10 to 12). There were 500 high schools that encompassed grades 8 to 12. About 1,800 secondary schools did not fit into any of these categories.

Among schools with both elementary and secondary grades, about 800 began with prekindergarten or kindergarten and ended with grade 12. Schools extending from grade 1 to grade 12 numbered 300. Nearly 700 schools with elementary and secondary grades did not fall into either of these categories.

The accompanying chart provides a distribution of public schools by the size of their enrollment in the fall of 1980. Implicit in the chart is the fact that elementary schools tended to be substantially smaller in enrollment size than did secondary schools. The average enrollment in all elementary schools was 391 pupils, while secondary schools averaged 730 pupils. Schools with both elementary and secondary grades had an average enrollment of 507 pupils.

Enrollment size was also closely related to the grade span of elementary schools. The average size of a middle school was 512 pupils, compared with 412 for a school extending from preprimary to grade 6 and 291 for a school from preprimary to grade 8. Schools without a kindergarten tended to be even smaller. The average for a school with grades 1 to 6 was 264 pupils; for a school with grades 1 to 8, it was 149 pupils.

Secondary schools also varied considerably in size according to their grade span. The largest type of high school was the senior high school (grades 10 to 12) with an average enrollment of 1,058. Four-year high schools (grades 9 to 12) averaged 843 pupils, while junior high schools (grades 7 to 8 and 7 to 9) averaged 634. Schools with grades 8 to 12 averaged 643, and junior-senior high schools (grades 7 to 12) were a great deal smaller with an average of 378 pupils.

Among schools with both elementary and secondary grades, the schools without a kindergarten (grades 1 to 12) were on the average substantially larger (681 pupils) than those extending from preprimary through grade 12 (450 pupils). These data were derived from a special tabulation by the National Center for Education Statistics using information obtained in the survey, Common Core of Data, 1980–81.

Courses Completed by High School Students

In the spring of 1980 during the initial phase of its study of *High School and Beyond,* the National Center for Education Statistics surveyed a representative sample of high school seniors around the nation. Information was collected on a variety of topics, including the educational experiences, extracurricular activities, values and attitudes, and post-high school plans of the students. Approximately 28,000 seniors in 1,015 high schools participated in the study. One area of the survey focused on the types of high school programs pursued and on the courses taken by the seniors in grades 10 through 12.

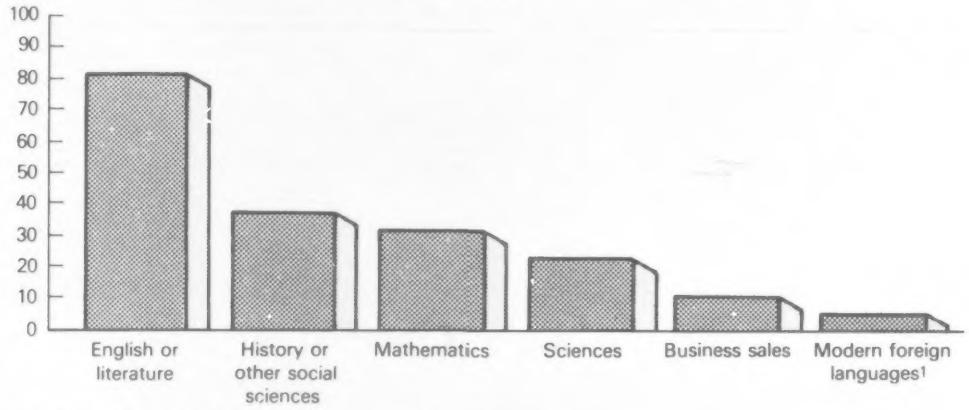
The data indicate that about 39 percent of the seniors pursued an academic program; 24 percent, a vocational-technical program; and 37 percent, a general program, neither primarily academic nor vocational in its orientation. An academic program normally prepares a student for college with such courses as English, foreign languages, history, mathematics, and science. A vocational program is usually designed to prepare a student for immediate employment after high school graduation. The type of vocational program most frequently elected by the 1980 seniors was a business curriculum, which may include such courses as general business, typing, shorthand, bookkeeping, and business arithmetic. Ten percent of the students reported that they pursued a program in business.

Ninety-six percent of the seniors indicated that they had completed two years or more of English or literature courses in grades 10 through 12. Eighty-one percent had completed two years or more of history or social studies. Sixty-six percent had taken two years or more of mathematics courses. Fifty-two percent had completed two years or more of science. Twenty-five percent had taken two years or more of a modern foreign language. In the vocational area, 27 percent of the students reported taking two years or more of business-sales courses. Figure 7 shows the percentage of students who concentrated in a particular field by taking three years or more of courses in that area.

Data were also collected on the percentage of seniors who had taken specific courses in mathematics and science. Participation tended to fall as the level and difficulty of the course advanced. Four-fifths of the students had taken algebra I, almost three-fifths had taken geometry, and one-half had taken algebra II. On the other hand, little more than one in four had taken a course in trigonometry, while fewer than one in ten had completed a course in calculus. About 38 percent of the seniors had taken a course in chemistry, but only about 20 percent had completed a course in physics.

Additional information on the class of 1980 appears in a report entitled *A Capsule Description of High School Students,* a publication of the National Center for Education Statistics, U.S. Department of Education.

Figure 8.—Percentage of high school seniors who had completed three or more years of courses in selected fields in grades 10 through 12: United States, spring 1980



[1]Includes French, German, and Spanish.

[1] Preliminary data.

[2] Includes expenditures by State departments and State boards of education and local education agencies.

[3] Includes food services and pupil activities paid from tax revenues.

[4] Includes summer schools, private schools, and community services.

[5] Estimated by the National Center for Education Statistics.

NOTE.—Because of rounding, details may not add to totals.

[1] Prior to 1959–60, items included under "other school services" were listed under "auxiliary services," a more comprehensive classification which also included community services.

[2] Prior to 1959–60, data shown for adult education represent combined expenditures for adult education, summer schools, and community colleges.

[3] Data not available.

[4] Prior to 1969–70, excludes capital outlay by State and local schoolhousing authorities.

[5] Less than 0.05 percent.

NOTE.—Beginning in 1959–60, includes Alaska and Hawaii. Because of rounding, details may not add to totals.

SOURCES: U.S. Department of Education, National Center for Education Statistics, *Statistics of State School Systems*; and special tabulation from the Common Core of Data survey.

CHAPTER III

COLLEGE AND UNIVERSITY EDUCATION

In 1982–83 there were 3,280 colleges, universities, and branch campuses in the United States. The largest numbers of institutions were concentrated in the most populous States—New York with 296 and California with 273 ranked first and second, respectively. Small or sparsely populated States like Delaware, Nevada, and Wyoming had the smallest number (8 each).

Despite the growth in the number of publicly controlled institutions in recent years, more than one-half of the colleges and universities are still controlled by private organizations, including religious denominations, professional organizations, and groups of public-spirited persons. However, the public colleges and universities tend to be much larger than their privately controlled counterparts. About 78 percent of all college students attend public institutions.

A salient characteristic of higher education in this country is its diversity. American colleges and universities offer a wide range and great variety of programs. For example, a junior college usually offers only the first 2 years of training at the college level, but a university normally offers a full undergraduate course in the liberal arts, graduate work leading to the doctorate, and courses preparing for entrance into at least two or three of the learned professions. Between these two extremes are numerous colleges which reflect local needs and purposes.

Higher education has become increasingly accessible to all segments of the population. The growth of public junior colleges and other low-cost public institutions means that the expenses of the students attending these institutions can be held to a minimum. The Basic Educational Opportunity Grant Program, Guaranteed Student Loan Program, and other Government programs have also attracted many students to higher education who otherwise would have found it difficult to finance a college education.

A less optimistic sidelight to higher education is that most American colleges and universities, faced with rising costs, have found it necessary to increase their basic student charges over time. Thus the typical college student usually finds that his expenses for tuition, fees, room, and board are higher when he returns to school in the fall than they were in the preceding year. How to raise fees without losing the students they would like to attract is a growing problem for college administrators.

The National Center for Education Statistics conducts an annual higher education general information survey (HEGIS) in which it obtains data on the institutional characteristics of colleges and universities; enrollment; faculty and faculty salaries; earned degrees conferred; and finances, including revenues, expenditures, and property. These data are published in the following reports: *Education Directory, Colleges and Universities; Fall Enrollment in Higher Education; Faculty Salaries, Tenure, and Benefits; Earned Degrees Conferred; Associate Degrees and Other Formal Awards Below the Baccalaureate;* and *Financial Statistics of Institutions of Higher Education.*

From time to time additional information is requested in the HEGIS survey. Among the data items that have been collected and reported on a recurring, but not an annual, basis are the following: residence and migration of college students, enrollment for advanced degrees, employees of institutions of higher education, and physical facilities.

This chapter provides an overview of the latest available statistics from the HEGIS reports. It also makes available in numerous instances historical data that enable the reader to observe long-range trends in American higher education. In addition, it provides summary data from the Cooperative Institutional Research Program on the characteristics of college freshmen; from the Bureau of the Census on the characteristics and majors of college students; and from the National Research Council on the backgrounds of recipients of doctor's degrees.

Table 70.—Total enrollment in institutions of higher education, by attendance status, sex of student, control of institution, and State: Fall 1981

State or other area	Total enrollment	Attendance status		Sex of student		Control of institution

[1] New students are those students who are enrolled at the reporting institution for the first time at each of the following levels: undergraduate, graduate, first-professional, or unclassified.

[2] "Students enrolled in State" are all of the new students reported by the institution attended; i.e., all inmigrants and "remaining" students (includes foreign students).

[3] "Student residents of State" are all students from a State in which they were residing when first admitted to the reporting institution at the current student level.

[4] "Students remaining in State" are students who attend institutions in their home State.

[5] The inmigration exceeds the outmigration by the number of students enrolled from outside the United States.

NOTE.—Data for U.S. Service Schools are included in State totals.

SOURCE: U.S. Department of Education, National Center for Education Statistics, survey of "Residence and Migration of College Students, Fall 1981."

[1] These institutions have a significant level of activity in doctoral-level education as measured by the number of doctoral recipients and the diversity in doctoral-level program offerings.

[2] These institutions have diverse post-baccalaureate programs, but do not engage in significant doctoral-level education.

[3] These institutions primarily emphasize general undergraduate education.

[4] These baccalaureate or post-baccalaureate institutions are characterized by an emphasis in one field of study, such as business or engineering.

[5] These institutions confer at least 75 percent of their degrees and awards below the bachelor's degree level.

[6] These institutions are new additions to the Higher Education General Information Survey universe (not necessarily newly organized). When degree and award data become available, they will be reclassified.

Hispanic	46.3	35.5	29.6	27.6	22.6	16.8	16.0	12.8
Other	43.8	39.4	35.2	32.3	24.9	15.9	16.9	14.8
Socioeconomic status:								
Low	34.6	26.4	22.0	19.8	15.9	10.1	8.8	9.4
Middle	51.3	42.3	34.9	32.0	21.3	14.1	13.5	12.8
High	79.6	70.7	65.0	63.3	40.1	26.9	23.7	20.0
Ability level:								
Low	30.6	21.9	16.6	15.5	12.4	8.5	7.5	7.2
Middle	53.5	43.6	36.6	33.0	21.1	14.9	13.5	13.2
High	79.7	72.0	66.4	63.3	39.4	27.2	24.7	22.0

[1] Socioeconomic status of students was derived from five components: father's education, mother's education, parents' income, father's occupation, and household items.

[2] Those students who could not be classified by race, socioeconomic status, or ability level were excluded from the respective category.

[3] Includes students not classified by race.

TRENDS IN COLLEGE ENROLLMENT: 1972 TO 1982

Each fall the National Center for Education Statistics (NCES) conducts a survey of enrollment in colleges, universities, and professional schools throughout the country. In October each year the Bureau of the Census, in its current population survey, obtains data on the demographic charateristics of college students. Data from the fall 1982 surveys have recently become available. When the statistics for fall 1982 are compared with those a decade earlier, some interesting trends in college enrollment emerge.

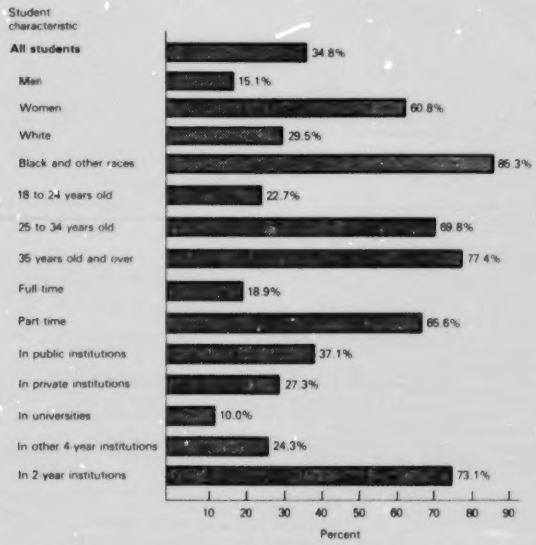
According to the NCES surveys, college enrollment increased from 9.2 million in fall 1972 to 12.4 million in fall 1982. The Bureau of the Census figures are quite similar. Both agencies reported a total enrollment increase of about 35 percent over the past decade. As the accompanying chart indicates, however, there were major differences in the rate of increase in college attendance among the various groups represented in the surveys. Growth rates were quite high for black and other races, persons 25 years old and over, students in 2-year institutions, part-time students, and women. They were relatively low for men, full-time students, persons 18 to 24 years old, students in universities and other 4-year institutions, and white students. The rate of growth was slightly above average for students in publicly controlled institutions and somewhat below average for those in private colleges and universities.

The proportion of college students who were women rose from 43.1 percent in 1972 to 51.5 percent in 1982. Black and other races represented 10.4 percent of total enrollment in 1972 compared with 14.3 percent 10 years later. Students 25 years of age and over accounted for 28.0 percent of the enrollment in 1972 and for 35.6 percent of the total in 1982. Part-time students constituted 34.1 percent of the entire student body in 1972 compared with 41.9 percent last fall.

Two-year colleges increased their share of total enrollment from 29.9 percent in 1972 to 38.4 percent in 1982. Publicly controlled institutions enrolled 76.7 percent of the students a decade earlier compared with 78.0 percent in 1982.

More detailed information on college enrollment may be found in the NCES reports on *Fall Enrollment in Colleges and Universities* and in the Bureau of the Census reports on *School Enrollment—Social and Economic Characteristics of Students.*

Figure 7.—Percentage increases in the enrollment of college students with selected characteristics: United States, fall 1972 to fall 1982



Sources: Data by race and by age are derived from the current population surveys of the Bureau of the Census, U.S. Department of Commerce. All of the other statistics are from the fall enrollment surveys of the National Center for Education Statistics, U.S. Department of Education.

[1] Prior to 1979–80, excludes branch campuses.

[2] Total number of different individuals (not reduced to full-time equivalent). Beginning in 1959–60, data are for the first term of the academic year.

[3] Estimated.

[4] Unless otherwise indicated, includes students enrolled at any time during the academic year.

[5] Data for first term of the academic year.

[6] Data for fall 1969.

[7] Fall enrollment. Includes resident and extension students in degree-credit and non-degree-credit programs.

[8] Beginning in 1969–70, includes all master's degrees.

[9] Data not available.

[10] Includes unexpended plant funds.

[11] Book value.

[12] Endowment funds only.

NOTE.—Beginning in 1959–60, includes Alaska and Hawaii.

[1] Data on the number of institutions and their enrollment are as reported in *Fall Enrollment in Higher Education.*

[2] The large increases in 1980 and 1981 are due to the addition of schools accredited by the National Association of Trade and Technical Schools.

NOTE.—Beginning in 1972, 2-year branches of universities and other 4-year institutions and the enrollment in those branches are included.

[3] Institutions with separate colleges for men and women.

SOURCE: U.S. Department of Education, National Center for Education Statistics, special tabulation derived from *Education Directory: Colleges and Universities, 1981–82.*

In Higher Education the Trend Is Toward Coeducation

The 1981–82 edition of the *Education Directory, Colleges and Universities,* prepared by the National Center for Education Statistics, lists 3,253 colleges, universities, and branch campuses in the United States. Of this total, 215 are designated as "single-sex" institutions, 104 for men and 111 for women; 3,038 are for both men and women.

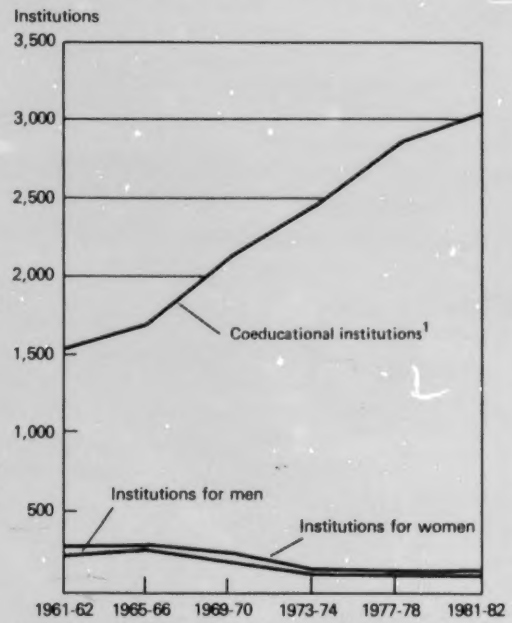
Over the past two decades there has been a substantial increase in the total number of higher education institutions in the country. Allowing for the fact that branch campuses are now counted separately whereas in 1961–62 they were counted as part of their parent institution, there has been a net gain of well over 900 schools during the past 20 years. Many of the newly established institutions have been public two-year colleges, which have made postsecondary education more accessible and less expensive.

In contrast to the growth of colleges and universities in general, there has been a substantial decline in the number of institutions for men and for women. The number of single-sex schools peaked in 1963–64 at 519 (240 for men and 279 for women). The trend was sharply downward in the decade that followed. Some of the Nation's most prestigious private institutions went coeducation during this period, and publicly controlled single-sex colleges were becoming very rare indeed. The movement toward coeducation has continued right down to the present day. In the past eight years there has been a net decrease of 23 men's and 31 women's colleges. (See the accompanying chart.)

The men's colleges stil remaining tend to be relatively small institutions. Their average enrollment is about 220 students, and their combined enrollment is only about 23,000. The largest institutions in the group are Morehouse College in Georgia, with an enrollment of about 2,000, and two Virginia schools, Washington and Lee University and Virginia Military Institute, with enrollments of about 1,600 and 1,300 students, respectively. The only publicly controlled institution for men is Virginia Military Institute. An overwhelming majority of the men's colleges are affiliated with some religious denomination.

The women's colleges enroll a total of about 113,000 students, or slightly over 1,000 students per institution. The largest institution in the group is Texas Woman's University with about 7,900 students. It is one of only two publicly controlled institutions among the women's colleges. The other is Mississippi University for Women, which enrolls about 2,100 students. The approximate enrollments of a few of the well-known, independently controlled colleges for women are as follows: Smith, 3,000; Barnard, 2,500; Wellesley, 2,200; Mount Holyoke, 2,000; and Bryn Mawr, 1,800. There are also many women's colleges that are affiliated with religious groups.

Figure 8.—Number of coeducational institutions of higher education and the number for men and for women: United States, 1961–62 to 1981–82



[1] Includes a relatively small number of institutions (14 in 1981–82) with coordinate campuses for men and for women students.

NOTE.—From 1961–62 through 1973–74, branch campuses were counted as part of the parent institution; in 1977–78 and 1981–82, they were counted separately.

[1] These institutions have a significant level of activity in doctoral-level education as measured by the number of doctoral recipients and the diversity in doctoral-level program offerings.

[2] These institutions have diverse postbaccalaureate programs, but do not engage in significant doctoral-level education.

[3] These institutions primarily emphasize general undergraduate education.

[4] These baccalaureate or postbaccalaureate institutions are characterized by an emphasis in one field of study, such as business or engineering.

[5] These institutions confer at least 75 percent of their degrees and awards below the bachelor's degree level.

[6] These institutions are new additions to the Higher Education General Information Survey universe (not necessarily newly organized). When degree and award data become available, they will be reclassified.

Changing Patterns in the Undergraduate Majors of College Students

The National Center for Education Statistics conducts an annual survey of *Earned Degrees Conferred* by American colleges and universities. The data from these surveys indicate that a dramatic shift has occurred in the undergraduate majors of college students in the past 15 years. There has been a substantial increase in the number and percent of students who major in occupationally oriented fields that are perceived by the students as qualifying them for jobs when they graduate. On the other hand, there has been a clearly discernible movement away from some of the traditional arts and sciences that are designed, at least in part, to provide a general education.

The accompanying chart shows the trend in bachelor's degrees conferred in selected arts and sciences and job-related fields from the year 1965–66 to 1980–81. The chart should be viewed in the context of total degree conferrals during this period. In 1965–66 the number of bachelor's degrees awarded in all fields was 520,000. By 1970–71 the number had risen nearly 62% to 840,000. During the next five years there was an increase of 10% to 926,000, and from 1975–76 to 1980–81 there was a further increase of 1% to 935,000.

In 1965–66 degrees in English and literature, history, mathematics, modern foreign languages, and physics constituted 20.4% of all bachelor's degrees conferred. By 1970–71, even though the total number of degrees in these fields had increased, they made up only 17.9% of all bachelor's degrees earned. In 1975–76 they accounted for only 10.6% of the bachelor's degrees and by 1980–81 they had declined to 7.4% of the total. Degrees in English and literature, history, mathematics, and modern foreign languages were declining as a percentage of the total throughout the 15-year period. Degrees in physics also declined but appear to have stabilized by 1980–81.

In 1965–66 degrees in business and management, engineering, the health professions, public affairs and services, and computer and information sciences comprised 22.6% of the total bachelor's degrees conferred. In 1970–71 they accounted for 24.1%; in 1975–76, 30.5%; and in 1980–81, 41.8%. Degrees in business and management, the health professions, and computer and information sciences increased at a rapid pace throughout the past 15 years. Degrees in public affairs and services also rose but appeared to be stabilizing at the end of the period. Degrees in engineering exhibited an irregular pattern but rose sharply after 1975–76.

At least one occupationally oriented field has not participated in the general rise in recent years. Bachelor's degrees in education, which prepare the recipients for employment as public school teachers, peaked at 194,000 in 1972–73 and subsequently declined by 44.3% to 108,000 in 1980–81. There has been an annual decrease in public school enrollment for a decade, and this has adversely affected the demand for new elementary and secondary school teachers.

Will the trend toward more specialization in job-related fields at the undergraduate level continue? The available data indicate that it will—at least for the next several years. When the National Center for Education Statistics asked a large sample of 1980 high school seniors about some of their life goals, 88% described "being successful in my line of work" as "very important" to them. A large group of college freshmen in fall 1981, replying to a questionnaire from the Cooperative Institutional Research Program, listed the following as their probable major fields of study: business, 23.7%; engineering, 12.0%; health-related fields, 10.6%; computer science, 3.5%; social work, 1.1%; and law enforcement, 1.1%. And when the College Entrance Examination Board asked the college-bound high school seniors of 1982 about their intended majors, the response was as follows: business and commerce, 18.7%; health and medical professions, 14.2%; engineering, 12.6%; computer science and systems analysis, 7.7%; and public service fields, 1.5%. Unless these young people change their plans significantly, many of them are likely to be candidates for job-oriented bachelor's degrees in the mid-1980's.

Note: Degree data are collected for 12-month periods beginning on July 1 and ending on June 30 of the following year.

NOTE.—Although a strenuous effort has been made to provide a consistent series of data, minor changes have occurred over time in the way degrees are classified and reported. Any degrees classified in early surveys as "first professional" are included above with bachelor's degrees; any degrees classified as "second professional" or "second level" are included with master's degrees. Data for all years are for 50 States and the District of Columbia.

[1] Includes degrees in astronomy, chemistry, geology, metallurgy, meteorology, physics, and other physical sciences.

NOTE.—Although a strenuous effort has been made to provide a consistent series of data, minor changes have occurred over time in the way degrees are classified and reported. Any degrees classified in early surveys as "first professional" are included above with bachelor's degrees; any degrees classified as "second professional" or "second level" are included with master's degrees. Data for all years are for 50 States and the District of Columbia.

[1] From 1869–70 through 1963–64, first-professional degrees are included with bachelor's degrees.

[2] Prior to 1965–66, some master's degrees in fields such as library science and social work were counted as first-professional degrees and are reported in column 3.

NOTE.—Beginning in 1959–60, includes Alaska and Hawaii.

[1] Includes Ph.D., Ed.D., and comparable degrees at the doctoral level. Excludes first-professional degrees, such as M.D., D.D.S., and D.V.M.

[2] Includes 267 degrees in other or unspecified fields not shown separately.

[3] Mathematics and computer sciences are included under physical sciences.

[4] Less than 0.05 percent.

NOTE.—The above classification of degrees by field differs somewhat from that in most publications of the National Center for Education Statistics. The major differences are that history is included under humanities rather than social sciences, and psychology is included under social sciences. The number of degrees also differs slightly from that reported in the NCES survey of *Earned Degrees Conferred*. Because of rounding, percents may not add to 100.0.

[1] Includes Ph.D., Ed.D., and comparable degrees at the doctoral level. Excludes first-professional degrees (e.g., M.D., D.D.S., and D.V.M.).

[2] Institutions are ranked by the total number of doctor's degrees conferred during the 10-year period 1971-72 to 1980-81.

[3] Includes degrees conferred by the Main Division and Teachers College.

[4] Includes degrees conferred by the Endowed and Statutory Colleges.

[1] Tuition and fees received from veterans under Public Law 550 are reported under student fees and not under income from the Federal Government.

[2] Income from the Federal Government for research at agricultural experiment stations administered by land-grant institutions is included under Federal Government "other purposes," not under "research."

[3] Data not separately collected.

[4] Includes Federal aid received through State channels and regional compacts, through 1959–60.

[5] Income from State and local governments tabulated under "State governments."

[6] Beginning in 1969–70, the private grants represent nongovernmental revenue for sponsored research and other sponsored programs.

[7] Specifically designated or earmarked funds.

[8] Major public service programs previously reported in Federal Government research, in related activities, and in other items of education and general revenue. Beginning in 1975–76 also includes a portion of previously reported related activities, and also independent operations (FFRDC).

[9] Data not collected.

[10] Does not include interfund transfers.

[11] Includes funds functioning as endowment; increase calculated on book value.

NOTE.—Beginning in 1959–60, data are for 50 States and the District of Columbia; data for earlier years are for 48 States and the District of Columbia. Because of rounding, details may not add to totals.

[1] Data have been revised since originally published.

[2] Preliminary estimates based on information collected by the American Council on Education.

NOTE.—Data are for the entire academic year and are average charges. Tuition and fees were calculated on the basis of full-time-equivalent students (including undergraduate resident and nonresident students). Room and board were based on full-time students. The data have not been adjusted for changes in the purchasing power of the dollar. Preliminary analysis indicates that the 1983–84 data compiled by the American Council on Education are comparable to prior years data compiled by the National Center for Education Statistics.

SOURCES: U.S. Department of Education, National Center for Education Statistics, *Higher Education Basic Student Charges, 1974–75; Fall Enrollment in Higher Education;* and unpublished data; American Council on Education, *College Costs* (July 1983).

[1] Includes "other sponsored programs."

[2] Data not collected separately.

[3] Sales and services expenditures.

[4] Data not tabulated separately.

[5] "Major public service programs" previously reported in "separately organized research," "extension and public services," and "related activities."

[6] Includes expenditures from plant and current funds, gifts and grants of plant assets, and increases in value due to reappraisal and other adjustments.

*Please refer to the next table for revised format for educational and general items. Includes scholarships and fellowships under educational and general. Student aid item previously reported has been dropped.

NOTE.—Beginning in 1959–60, data are for 50 States and the District of Columbia; data for earlier years are for 48 States and the District of Columbia. Because of rounding, details may not add to totals.

Endowment Trends in Institutions of Higher Education

One of the numerous sources that colleges and universities depend on for revenues is income from endowment funds. These permanent accounts generate income to support a variety of education programs, such as scholarships for students or salaries for certain professors. The purpose of a donation to an endowment fund is frequently designated by the benefactor. While the proportion of all current-fund revenues received from endowments is only about 2.1%, some institutions obtain 20% or more of their current-fund revenues from this source.

The market value of endowment funds at the Nation's colleges increased 71.1% during the 10-year period from 1971 to 1981. The endowment of public institutions rose from $2.2 billion in 1971 to $4.2 billion in 1981 while endowment of private institutions increased from $11.6 billion to $19.3 billion (see accompanying chart). Despite the increase in endowments, there was a marked decline in their real value when adjusted for inflation. Overall, that real value declined about 15.8% during the 10-year period. The relatively poor performance of bond investments during these years was an important factor in the decline. Changes in real value of endowment funds also tend to mirror the swings in the stock market. For example, the sharp drop of college endowments in 1974 may be attributed in part to falling stock market prices.

At the end of fiscal year 1981, 1,888 institutions of higher education had endowment funds. Four-year colleges were much more likely to have endowments than two-year colleges, however, on a percentage basis, the endowments of two-year colleges have been increasing more rapidly. A total of 1,162 or nearly 83% of all private four-year colleges had endowment funds. The approximately 600 public colleges with endowment funds accounted for about 40% of all public colleges.

Although a large number of colleges held endowment funds, much of the money was concentrated in a relatively small number of institutions. The 10 universities with the largest endowments in 1981 were:

	(In millions)
Harvard University (Mass.)	$1,713
University of Texas at Austin	1,361
Yale University (Conn.)	799
Stanford University (Calif.)	688
Princeton University (N.J.)	686
University of Rochester (N.Y.)	501
Massachusetts Institute of Technology	500
University of Chicago (Ill.)	397
Rice Unversity (Tex.)	391
Columbia Unversity, Main Division (N.Y.)	360
Total	$7,397*

*Because of rounding, details do not add to total.

Nine of the 10 institutions listed above are privately controlled. The only public institution in the top 10 is the University of Texas at Austin. This university not only had the largest endowment of any public college, but alone accounted for about one third of the endowment of all public institutions. The increase in the endowment fund at the University of Texas was one of the reasons that the real value of endowments of all public institutions fell at a slower rate than that of private institutions. Together, these 10 universities held endowments with a market value of $7.4 billion, or about 31.5% of all college endowment funds.

Figure 10.—Market value of endowment in current and in adjusted dollars in institutions of higher education, by control of institution: United States, 1971 to 1981

CHAPTER IV

Adult and Vocational Education

The American people have come to realize more and more that education can be a lifelong experience. The result has been an increased emphasis upon adult education to meet the needs of persons beyond the traditional age for attendance at regular educational institutions. Furthermore, there has been a growing awareness of the desirability and feasibility of training young people for useful employment as part of their formal education. This has resulted in a markedly upward trend in enrollments in and expenditures for vocational education programs at the secondary and postsecondary levels.

The Education Amendments of 1976 (Public Law 94–482) directed the National Center for Education Statistics to develop a nationwide Vocational Education Data System (VEDS). This system became operational with the collection of data for school year 1978–79. A report entitled *The Condition of Vocational Education* was released by the Center in the summer of 1981.

Earlier, the Center had recognized the importance of adult and vocational education by establishing an Adult and Vocational Education Surveys and Studies Branch. Through a series of statistical surveys, this branch is contributing to our knowledge of developing trends in these dynamic areas. Several major surveys of adult education were conducted between 1969 and 1981. This chapter summarizes survey data on the demographic characteristics of participants in adult education programs and on the types of programs in which they were enrolled. It also contains the latest information from the annual survey of participants in adult basic and secondary education programs.

The Adult and Vocational Education Surveys Branch also conducts a biennial survey of postsecondary (noncollegiate) schools offering occupational programs. Summary tables in this chapter provide statistics on the number of these schools and on their program offerings, enrollment, and instructional staff. It should be noted that these tables do not include enrollment in occupational or non-degree-credit programs offered by colleges and universities. Enrollments in these programs, which have grown rapidly in recent years (especially in public 2-year colleges), are included in appropriate tables in chapter III.

The Federal Government's interest in vocational education dates back at least as far as the passage of the Smith-Hughes Act of 1917. (Chapter V contains a synopsis of significant Federal legislation affecting vocational education.) The Division of Vocational and Technical Education in the U.S. Office of Education (predecessor of the U.S. Department of Education) compiled statistics on federally aided vocational programs for many years. Data on enrollment and teachers in vocational education and expenditures for these programs are summarized in the tables that follow.

Adult Education

According to the National Center for Education Statistics, there was an all-time high of 21,252,000 participants in adult education [1] in 1981. These participants represented 12.8 percent of the total adult population (17 years old and over) in the U.S. These figures come from the Bureau of the Census survey of May 1981, part of its Current Population Survey of 58,000 households.

Of the over 21 million participants, men made up 44 percent while 56 percent were women. The two age groups with the largest number of participants for both males and females were the 25- to 34-year-olds (largest) and the 35- to 44-year-olds (next largest). Of the total 9.3 million male participants, 36.2 percent (3.4 million) fell in the 25 to 34 age group, and 22.2 percent (2.1 million) were 35 to 44 years of age. Of the total 11.9 million female participants, the 25 to 34 age group (4.1 million) accounted for 34.7 percent, while women 35 to 44 years of age (2.4 million) represented 20.5 percent of all female participants. Participants under 25 and those 45 and over accounted for less than 20 percent of the total number of people in adult education.

Whites comprised 87.9 percent of the adult education participants, blacks 6.1 percent, and Hispanics, 3.6 percent of the total. All other races accounted for 2.4 percent.

By family income, there was a relatively large number of persons in the $25,000 to $49,999 income bracket. This group, constituting 18.3 percent of the adult population, accounted for 34.4 percent of the participants in adult education.

Adult education participants took a total of 37.4 million courses in 1981. Almost 23 percent of the courses were in the field of business. Health-related courses accounted for nearly 14 percent of the courses and engineering and engineering technology made up nearly 10 percent.

Additional information on the age and income level of participants and on the courses of study appear in the accompanying charts.

The survey of adult education also includes information on labor force status, occupation, years of school completed, type of area, and region of participants in adult education. These data are summarized in a release from the National Center for Education Statistics entitled "Participation in Adult Education, May 1981."

[1] Adult education includes all courses and other organized educational activities, taken by persons 16 years of age and over other than courses taken as a full-time student in a program leading toward a high school diploma or a college degree or as a full-time student in a vocational or occupational program.

[2] Includes agriculture and renewable natural resources; arts, visual and performing; home economics; personal services occupations; language, linguistics, and literature; life sciences, physical sciences, and mathematical sciences; physical education and leisure; social studies and social sciences; interdisciplinary studies; and unclassified areas.

CHAPTER V

FEDERAL PROGRAMS FOR EDUCATION AND RELATED ACTIVITIES

Grants of public lands for maintenance of the public schools were authorized by the Congress of the Confederation in 1785. Then, in 1787, Federal land was granted for education under the Northwest Ordinance when the United States Government entered into a contract to sell a large tract of land in Ohio, with a section of each township involved in the sale reserved for schools. Additional land was reserved for a university. From this modest beginning there has emerged the current complex pattern of Federal educational support.

Federal support for education is not definable as a single unified national plan. Rather, the national effort is a collection of individual programs and procedures, each individually enacted into law to support or accomplish a specific purpose. Each program reflects a perceived national problem or need and establishes a method to mitigate or eliminate the problem. Consequently, it is not surprising that Federal educational assistance programs or activities show great variety.

This chapter provides a summary of the Federal funds for these programs to help describe the magnitude of the Federal fiscal effort and give some indication of the scope and variety of the programs.

A capsule view of the history of Federal educational activities is provided in the following list of selected legislation:

Year

1787 Northwest Ordinance—authorized land grants for the establishment of educational institutions.

1802 An act fixing the military peace establishment of the United States—established the U.S. Military Academy. (The U.S. Naval Academy was established in 1845 by the Secretary of the Navy.)

1862 First Morrill Act—authorized public land grants to the States for the establishment and maintenance of agricultural and mechanical colleges.

1867 Department of Education Act—authorized the establishment of the Department of Education.[1]

1876 Appropriation Act, Department of the Treasury—established the U.S. Coast Guard Academy.

1890 Second Morrill Act—provided for money grants for support of instruction in the agricultural and mechanical colleges.

1911 The State Marine School Act—authorized Federal funds to be used for the benefit of any nautical school in any of 11 specified State seaport cities.

1917 Smith-Hughes Act—provided for grants to States for support of vocational education.

1918 Vocational Rehabilitation Act—Provided for grants for rehabilitation through training of World War I veterans.

1919 An act to provide for further educational facilities—authorized the sale by the Federal Government of surplus machine tools to educational institutions at 15 percent of acquisition cost.

1920 Smith-Bankhead Act—authorized grants to States for vocational rehabilitation programs.

1935 Bankhead-Jones Act (P.L. 74-182)—authorized grants to States for agricultural experiment stations.

Agricultural Adjustment Act (P.L. 74-320)—authorized 30 percent of the annual customs receipts to be used to encourage the exportation and domestic consumption of agricultural commodities. Commodities purchased under this authorization

[1] The Department of Education as established in 1867 was later to be known as the Office of Education until 1979, when, under P.L. 96-88, it was again designated as a "department." Therefore, for purposes of consistency, it is referred to as the "Department of Education" even in those tables covering years when it was officially the "Office of Education."

began to be used in school lunch programs in 1936. The National School Lunch Act of 1946 continued and expanded this assistance.

1936 An act to further the development and maintenance of an adequate and well balanced American Merchant Marine (P.L. 84-415)—established the U.S. Merchant Marine Academy.

1937 National Cancer Institute Act—established the Public Health Service fellowship program. Subsequently, other fellowships were authorized in legislation concerning other agencies.

1941 Amendment to Lanham Act of 1940—authorized Federal aid for construction, maintenance, and operation of schools in federally impacted areas. Such assistance was continued under P.L. 815 and P.L. 874, 81st Congress, in 1950.

1943 Vocational Rehabilitation Act (P.L. 78-16)—provided assistance to disabled veterans.

School Lunch Indemnity Plan (P.L. 78-129)—provided funds for local lunch food purchases.

1944 Servicemen's Readjustment Act (P.L. 78-346)—provided assistance for education of veterans.

Surplus Property Act (P.L. 78-457)—authorized transfer of surplus property to educational institutions.

1946 National School Lunch Act (P.L. 79-396)—authorized assistance through grants-in-aid and other means to States to assist in providing adequate foods and facilities for the establishment, maintenance, operation, and expansion of nonprofit school lunch programs.

George-Barden Act (P.L. 79-586)—expanded Federal support of vocational education.

1948 United States Information and Educational Exchange Act (P.L. 80-402)—provided for the interchange of persons, knowledge, and skills between the United States and other countries.

1949 Federal Property and Administrative Services Act (P.L. 81-152)—provided for donation of surplus property to educational institutions and for other public uses.

1950 Financial assistance for local educational agencies affected by Federal activities (P.L. 81-815 and P.L. 81-874)—provided assistance for construction (P.L. 815) and operation (P.L. 874) of schools in federally affected areas.

Housing Act (P.L. 81-475)—authorized loans for construction of college housing facilities.

1954 An act for the establishment of a United States Air Force Academy and other purposes (P.L. 83-325)—established the U.S. Air Force Academy.

Cooperative Research Act (P.L. 83-531)—authorized cooperative arrangements with universities, colleges, and State education agencies for educational research.

National Advisory Committee on Education Act (P.L. 83-532)—established a National Advisory Committee on Education to recommend to the Secretary of Health, Education, and Welfare needed studies of national concern in the field of education and to propose appropriate action indicated by such studies.

School Milk Program Act (P.L. 83-690)—provided funds for purchase of milk for school lunch programs.

1956 Library Services Act (P.L. 84-597)—authorized grants to States for extension and improvement of rural public library services.

1957 Practical Nurse Training Act (P.L. 84-911)—provided grants to States for practical nurse training.

1958 National Defense Education Act (P.L. 85-865)—provided assistance to State and local school systems for strengthening instruction in science, mathematics, modern foreign languages, and other critical subjects; improvement of State statistical services; guidance, counseling, and testing services and training institutes; higher education student loans and fellowships; foreign language institutes and advanced foreign language study and training provided by colleges and universi-

ties; experimentation and dissemination of information on more effective utilization of television, motion pictures, and related media for educational purposes; and vocational education for technical occupations necessary to the national defense.

Education of Mentally Retarded Children Act (P.L. 85-926)—authorized Federal assistance for training teachers of the handicapped.

Captioned Films for the Deaf Act (P.L. 85-905)—authorized a loan service of captioned films for the deaf.

1961 Area Redevelopment Act (P.L. 87-27)—included provisions for training or retraining of persons in redevelopment areas.

1962 Manpower Development and Training Act (P.L. 87-415)—provided training in new and improved skills for the unemployed and underemployed.

Communications Act of 1934, Amendment (P.L. 87-447)—provided grants for the construction of educational television broadcasting facilities.

Migration and Refugee Assistance Act of 1962 (P.L. 87-510)—authorized loans, advances, and grants for education and training of refugees.

1963 Health Professions Educational Assistance Act (P.L. 88-129)—provided funds to expand teaching facilities and for loans to students in the health professions.

Vocational Education Act of 1963 (P.L. 88-210)—increased Federal support of vocational education schools, vocational work-study programs and research, training, and demonstrations in vocational education.

Higher Education Facilities Act of 1963 (P.L. 88-204)—authorized grants and loans for classrooms, libraries, and laboratories in public community colleges and technical institutes as well as undergraduate and graduate facilities in other institutions of higher education.

1964 Civil Rights Act of 1964 (P.L. 88-352)—authorized the Commissioner to (1) arrange, through grants or contracts with institutions of higher education, for the operation of short-term or regular session institutes for special training to improve ability of elementary and secondary school instructional staff to deal effectively with special education problems occasioned by desegregation; (2) make grants to school boards to pay, in whole or in part, the cost of providing inservice training in dealing with problems incident to desegregation; and (3) provide school boards technical assistance in desegregation and required nondiscrimination in federally assisted programs.

Economic Opportunity Act of 1964 (P.L. 88-452)—authorized grants for college work-study programs for students from low-income families; established a Job Corps program and authorized support for work-training programs to provide education and vocational training and work experience for unemployed youths; provided training and work experience opportunities in welfare programs; authorized support of education and training activities and of community action programs, including Head Start, Follow Through, and Upward Bound; and authorized the establishment of Volunteers in Service to America (VISTA).

1965 Elementary and Secondary Education Act (P.L. 89-10)—authorized grants for elementary and secondary school programs for children of low-income families; school library resources, textbooks, and other instructional materials for school children; supplementary educational centers and services; strengthening State education agencies; and educational research and research training.

Health Professions Educational Assistance Amendments (P.L. 89-290)—authorized scholarships to aid needy students in the health professions and grants to improve the quality of teaching in schools of

medicine, dentistry, osteopathy, optometry, and podiatry.

Higher Education Act of 1965 (P.L. 89–329)—provided grants for university community service programs, college library assistance, library training and research, strengthening developing institutions; teacher training programs; and undergraduate instructional equipment. Authorized insured student loans, established a National Teacher Corps, and provided for graduate teacher training fellowships.

Medical Library Assistance Act (P.L. 89–291)—provided assistance for construction and improvement of health sciences libraries.

National Foundation on the Arts and the Humanities Act (P.L. 89–209)—authorized grants and loans for projects in the creative and performing arts, and for research, training, and scholarly publications in the humanities.

National Technical Institute for the Deaf Act (P.L. 89–36)—provided for the establishment, construction, equipping, and operation of a residential school for postsecondary education and technical training of the deaf.

National Vocational Student Loan Insurance Act (P.L. 89–287)—encouraged State and nonprofit private institutions and organizations to establish adequate loan insurance programs to assist students to attend postsecondary business, trade, technical, and other vocational schools.

Disaster Relief Act (P.L. 89–313)—provided for assistance to local education agencies to help meet exceptional costs resulting from a major disaster.

1966 International Education Act (P.L. 89–698)—provided grants to institutions of higher education for the establishment, strengthening, and operation of centers for research and training in international studies and the international aspects of other fields of study.

National Sea Grant College and Program Act (P.L. 89–688)—authorized the establishment and operation of sea grant colleges and programs by initiating and supporting programs of education and research in the various fields relating to the development of marine resources.

Adult Education Act (P.L. 89–750)—authorized grants to States for the encouragement and expansion of educational programs for adults, including training of teachers of adults and demonstrations in adult education (previously part of the Economic Opportunity Act of 1964).

Model Secondary School for the Deaf Act (P.L. 89–694)—authorized the establishment and operation, by Gallaudet College, of a model secondary school for the deaf to serve the National Capital region.

Elementary and Secondary Education Amendments of 1966 (P.L. 89–750)—In addition to modifying existing programs, authorized grants to assist States in the initiation, expansion, and improvement of programs and projects for the education of handicapped children at the preschool, elementary and secondary school levels.

1967 Education Professions Development Act (P.L. 90–35)—amended the Higher Education Act of 1965 for the purpose of improving the quality of teaching and to help meet critical shortages of adequately trained educational personnel.

Public Broadcasting Act of 1967 (P.L. 90–129)—established a Corporation for Public Broadcasting to: Assume major responsibility in channeling Federal funds to noncommercial radio and television stations, program production groups, and ETV networks directly or through contract; conduct research, demonstration, or training in matters related to noncommercial broadcasting; and award grants for construction of educational radio as well as television facilities.

1968 Elementary and Secondary Education Amendments of 1967 (P.L. 90–

247)—in addition to modifying existing programs, authorized support of regional centers for education of handicapped children, model centers and services for deaf-blind children, recruitment of personnel and dissemination of information on education of the handicapped; technical assistance in education to rural areas; support of dropout prevention projects; and support of bilingual education programs.

Handicapped Children's Early Education Assistance Act (P.L. 90–538)—authorized preschool and early education programs for handicapped children.

Vocational Education Amendments of 1968 (P.L. 90–576)—changed the basic formula for allocating funds; provided for a National Advisory Council on Vocational Education, expansion of vocational education services to meet the needs of the disadvantaged, collection and dissemination of information for programs administered by the Commissioner of Education, and preparation of a catalog of all Federal education assistance programs.

Higher Education Amendments of 1968 (P.L. 90–575)—authorized new programs to assist disadvantaged college students through special counseling and summer tutorial programs, and programs to assist colleges to combine resources for cooperative uses, including closed-circuit television and computer networks. Also authorized grants to expand and strengthen student cooperative programs and to expand programs which provide clinical experiences to law students.

1970 Elementary and Secondary Education Assistance Programs, Extension (P.L. 91–230)—authorized comprehensive planning and evaluation grants to State and local education agencies; provided for the establishment of a National Commission on School Finance.

National Commission on Libraries and Information Science Act (P.L. 91–345)—established a National Commission on Libraries and Information Science to effectively utilize the Nation's educational resources and to cooperate with State and local governments and public and private agencies in assuring optimum provision of services.

Office of Education Appropriation Act (P.L. 91–380)—provided emergency school assistance to desegregating local education agencies.

Environmental Education Act (P.L. 91–516)—established an Office of Environmental Education to: Develop curriculum and initiate and maintain environmental education programs at the elementary-secondary levels; disseminate information; provide training programs for teachers and other educational, public, community, labor, and industrial leaders and employees; provide community education programs; and distribute material dealing with environment and ecology.

Drug Abuse Education Act of 1970 (P.L. 91–527)—provided for: Development, demonstration, and evaluation of curriculums on the problems of drug abuse; dissemination of information; support of training programs for teachers, counselors, law-enforcement officers, and other public leaders and officials; and support of community education programs for parents and others on drug abuse problems.

1971 Comprehensive Health Manpower Training Act of 1971 (P.L. 92–257)—amended title VII of the Public Health Service Act, increasing and expanding provisions for health manpower training and training facilities.

Nurse Training Act of 1971 (P.L. 92–158)—amended title VIII, Nurse Training, of the Public Health Service Act, increasing and expanding provisions for nurse training facilities.

1972 Drug Abuse Office and Treatment Act of 1972 (P.L. 92–255)—established a Special Action Office for Drug Abuse Prevention to provide overall planning and policy for all Federal drug-abuse prevention functions; a

National Advisory Council for Drug Abuse Prevention; community assistance grants for community mental health centers for treatment and rehabilitation of persons with drug-abuse problems, and, in December 1974, a National Institute of Drug Abuse.

Education Amendments of 1972 (P.L. 92–318)—established the Education Division and the National Institute of Education; general aid for institutions of higher education; Federal matching grants for State student incentive grants; a National Commission on Financing Postsecondary Education; State Advisory Councils on Community Colleges; a Bureau of Occupational and Adult Education and State grants for the design, establishment, and conduct of postsecondary occupational education; and a bureau-level Office of Indian Education. Amended current Office of Education programs to increase their effectiveness and better meet special needs. Prohibited sex bias in admission to vocational, professional, and graduate schools, and public institutions of undergraduate higher education.

1973 Older Americans Comprehensive Services Amendment of 1973 (P.L. 93–29)—made available to older citizens comprehensive programs of health, education, and social services.

Comprehensive Employment and Training Act of 1973 (P.L. 93–203)—provided for opportunities for employment and training to unemployed and underemployed persons. Extended and expanded provisions in the Manpower Development and Training Act of 1962, Title I of the Economic Opportunity Act of 1962, Title I of the Economic Opportunity Act of 1964, and the Emergency Employment Act of 1971 as in effect prior to June 30, 1973.

1974 Educational Amendments of 1974 (P.L. 93–380)—provided for the consolidation of certain programs; established a National Center for Education Statistics in the Office of the Assistant Secretary for Education and transferred to the Center, from the Office of Education, the responsibility for the collection and diffusion of education statistics; specified that the Office of Education shall be the primary Federal agency responsible for the administration of programs of financial assistance to educational agencies, institutions, and organizations; authorized a White House Conference on Education, and mandated several education surveys and studies.

Juvenile Justice and Delinquency Prevention Act of 1974 (P.L. 93–415)—provided for technical assistance, staff training, centralized research, and resources to develop and implement programs to keep students in elementary and secondary schools and prevent unwarranted and arbitrary suspensions and expulsions; established, in the Department of Justice, a National Institute for Juvenile Justice and Delinquency Prevention.

White House Conference on Library and Information Services Act (P.L. 93–568)—authorized and requested the President to call a White House conference on library and information services not later than 1978.

1975 Indian Self-Determination and Education Assistance Act (P.L. 93–638)—provided for increased participation of Indians in the establishment and conduct of their education programs and services.

Harry S. Truman Memorial Scholarship Act (P.L. 93–642)—established the Harry S. Truman Scholarship Foundation and created a perpetual education scholarship fund for young Americans to prepare and pursue careers in public service.

Indochina Migration and Refugee Assistance Act of 1975 (P.L. 94–23)—authorized funds to be used for education and training of aliens who have fled from Cambodia or Vietnam.

1976 Educational Broadcasting Facilities and Telecommunications Demon-

stration Act of 1976 (P.L. 94-309)—established a telecommunications demonstration program to promote the development of nonbroadcast telecommunications facilities and services for the transmission, distribution, and delivery of health, education, and public or social service information.

Education Amendments of 1976 (P.L. 94-482)—extended and revised Federal programs for education assistance for higher education, vocational education, and a variety of other programs. Provided for payments to institutions of higher education for administration expenses for Federal student assistance, establishment of higher education centers and services for education information to assist students and teachers, collection of vocational and occupational education data, control and coordination of data collection activities between the Office of Education and the Office for Civil Rights, and a report to the Congress (due June 30, 1977) containing analyses and recommendations for a reorganization of the Education Division.

1977 Youth Employment and Demonstration Projects Act of 1977 (P.L. 95-93)—established a youth employment training program that includes, among other activities, promoting education-to-work transition, literacy training and bilingual training, attainment of certificates of high school equivalency, job sampling including vocational exploration in the public and private sector, and institutional and on-the-job training including development of basic skills and job skills.

1978 Career Education Incentive Act (P.L. 95-207)—authorized the establishment of a career education program for elementary and secondary schools.

Tribally Controlled Community College Assistance Act (P.L. 95-471)—provided Federal funds for the operation and improvement of tribally controlled community colleges for Indian students.

Education Amendments of 1978 (P.L. 95-561)—established a comprehensive basic skills program aimed at improving pupil achievement in reading, mathematics, and written and oral communication (replaced the existing National Reading Improvement program); established a community schools program to provide for the use of public buildings, including schools, as a community center operated by a local education agency in conjunction with other agencies and organizations in the community; authorized a broad program of study with regard to school finance reform and equalization.

Middle Income Student Assistance Act (P.L. 95-566)—modified the provisions for student financial assistance programs to allow middle income as well as low income students attending college or other postsecondary institutions to qualify for Federal education assistance.

1979 Department of Education Organization Act (P.L. 96-88)—established a Department of Education. Provided for the transfer into the new Education Department of functions of the Education Division of the Department of Health, Education, and Welfare along with other selected programs for education administered within H.E.W. and functions of other selected programs for education in the Department of Defense, Department of Housing and Urban Development, Department of Justice, Department of Labor, and the National Science Foundation.

1980 Asbestos School Hazard Protection and Control Act of 1980 (P.L. 96-270)—established a program for inspection of schools for detection of hazardous asbestos materials and provided loans to assist educational agencies to contain or remove and replace such materials.

Amendments to the Higher Education Act of 1965 (P.L. 96-374)—provided for a new "Commission on

National Development in Postsecondary Education" and a new "Urban Grant University Program."

1981 Education Consolidation and Improvement Act of 1981 (P.L. 97-35)—consolidated 42 programs into 7 programs to be funded under the elementary and secondary block grant authority.

Table 143.—Federal funds for education, by agency: Fiscal years 1979 to 1982

[In thousands of dollars]

Agency	1979	1980	1981	1982 [1]
1	2	3	4	5
Total	**$27,001,843**	**$31,755,018**	**$33,812,727**	**$31,703,495**
Department of Education	10,334,515	13,916,217	15,018,573	14,069,740
Department of Agriculture	3,765,581	4,503,136	4,674,829	3,834,494
Department of Commerce	[1] 20,953	50,050	18,695	7,050

Table 144.—Federal funds obligated for major programs administered by the Department of Education: Fiscal years 1980 to 1985—Continued

[In thousands of dollars]

Program	1980	1981	1982	1983	1984[1]	1985[1]
1	2	3	4	5	6	7
Trust funds	- - -	- - -	- - -	25	38	- - -
Expenditures from funds transferred to the Department of Education from other Federal agencies:[20]						
Refugee education assistance	23,200	22,700	22,700	16,600	16,600	- - -
Cuban and Haitian entrants	- - -	6,000	5,700	5,000	5,000	- - -

[1] The 1984 obligation data are estimates; the 1985 data reflect the President's Budget request for that year.

[2] Includes funds previously authorized under Title I of the Elementary and Secondary Education Act and now obligated under chapter 1 of the Education Consolidation and Improvement Act of 1981 (ECIA).

[3] Includes amounts for equal educational opportunity, which encompasses Emergency School Aid (except for 1980), libraries and learning resources, and school improvement programs. These and other elementary and secondary education programs comprise State block grants authorized under chapter 2, ECIA.

[4] Includes bilingual vocational education training.

[5] Includes small amounts for disaster assistance.

[6] Includes Basic and Supplemental Opportunity Grants, State Student Incentive Grants, and some graduate fellowships.

[7] Includes teacher cancellations.

[8] The largest component is interest subsidies. Also includes other subsidies and Federal costs related to loan insurance and reinsurance which are principally default claims.

[9] Includes Upward Bound, Talent Search, Education Opportunity Centers, Special Services, and staff training.

[10] These amounts do not reflect annual loan repayments and interest income of the revolving loan funds.

[11] Includes special programs for the disadvantaged and programs of national significance.

[12] Includes language training and area studies, college personnel training and fellowships, and education research training.

[13] Starting in 1981, included above in chapter 2, ECIA, special programs and populations.

[14] Includes obligations of the National Institute of Education and the National Center for Education Statistics and research libraries.

[15] Includes rehabilitation research overseas and activities authorized by the Fulbright-Hays Act.

[16] This program is being phased into the block grant programs of ECIA, chapter 2.

[17] Starting in 1981, includes salaries and expenses for the civil rights programs and for the Office of the Inspector General.

[18] In 1982, the Institute for Museum Services was transferred to the National Foundation on the Arts and the Humanities.

[19] Only academic program funds are reported here. Excludes funds for teaching hospital facilities and construction.

[20] Amounts listed below are not included in the Department of Education Expenditure totals. In 1984, both programs are scheduled for merging into a proposed consolidated refugee and entrants program to be distributed on a per capita basis.

NOTE.—Because of rounding, details may not add to totals.

SOURCE: Office of Management and Budget, *Budget of the United States Government*, appendix volumes for fiscal years 1982, 1983, 1984, and 1985.

[1] Includes Chapter 1, Education Consolidation and Improvement Act of 1981.

[2] Includes Chapter 2, Education Consolidation and Improvement Act of 1981.

[3] Includes maintenance and operations.

[4] Includes State grants and preschool incentive grants to States.

[5] Includes Basic Educational Opportunity Grants (Pell Grants), Work Study Program, Supplemental Opportunity Grants and State Student Incentive Grants.

[6] Includes institutional aid to strengthen higher education institutions serving significant numbers of low-income pupils, other special programs for the disadvantaged, Cooperative Education, Fund for the Improvement of Postsecondary Education, fellowships, and annual interest grants for facilities construciton.

[7] Federal capital contribution for long-term low interest loans to financially needy students. Excludes interest subsidies and other costs of the guaranteed student loan program.

[8] Recoveries from previous loans.

NOTE—Because of rounding, details may not add to totals.

[1] Dollars reflect actual obligations during the fiscal year regardless of when the funds were actually spent by a recipient institution. Data include obligations to federally funded research and development centers administered by colleges and universities.

[2] Includes Department of Commerce, Department of Housing and Urban Development, Department of the Interior, Agency for International Development, Department of Labor, Department of Transportation, and Nuclear Regulatory Commission.

NOTE.—Totals exclude loans to individuals such as the Federal Guaranteed Student Loan program sponsored by the Department of Education, and Federal training and development activities, as well as funds allocated to State agencies, even though the final recipient of such funds is known to be an academic institution. Tuition support programs such as Pell Grants are included in these figures.

CHAPTER VI

Special Studies and Statistics Related to American Education

This chapter consists of a varied collection of statistics that relate education to the world of work and to other facets of society. The data are arranged in three major categories: (1) The employment status, occupation, and income of school dropouts and of persons completing varying levels of education; (2) international education; and (3) learning resources and technology.

Included in the first group of tables are data from the Bureau of Labor Statistics on the years of school completed by persons in various occupational groups. The Bureau of Labor Statistics is also the source for several of the tabulations concerning the employment of recent high school and college graduates and school dropouts. The College Placement Council has provided information on salaries offered candidates for bachelor's, master's, and doctor's degrees. The Bureau of the Census is the source for data on the annual and lifetime income of persons by years of school completed.

The section on international education contains data from the Institute of International Education on American college students abroad as well as statistics on foreign students enrolled in American institutions of higher education. Two tables from the United Nations Educational, Scientific, and Cultural Organization (UNESCO) provide data on population, school enrollment, and expenditures for major areas of the world. International comparisons in the field of education must be made with care, since enrollment estimates tend to be prepared in a variety of ways and for different years, and the enrollment groupings by level are not strictly comparable from one country to another. The Bureau of the Census is the source for a table that provides comparative statistics on literacy rates in a number of different countries.

The third group of tables contains data from the National Center for Education Statistics on public libraries, public school libraries, college and university libraries, public television stations, and computers in use in public schools.

Lifetime Earnings by Years of School Completed

The Bureau of the Census has recently released new estimates of the average lifetime earnings of men and women by years of school completed. The data were derived from earnings reported around 1979, but they have been converted to constant dollars based upon consumer prices in 1981. The estimates that follow assume no change in the annual productivity rate in the years ahead and also a zero discount rate, i.e., that nominal interest rates will be offset by inflation. They also assume that earnings begin at age 18 and end when a person reaches 65.

According to the Bureau of the Census, a man with less than 12 years of school can look forward to lifetime earnings of $601,000, while a high school graduate can expect $861,000. A man with 1 to 3 years of college can expect earnings of $957,000; one with 4 years of college, $1,190,000; and one with 5 or more years of college, $1,301,000.

Earnings of women are substantially less than those of men, due in part to the fact that women typically experience more interruptions in their working careers than men do. A woman with less than 12 years of school can anticipate earnings of $211,000, while a high school graduate can look forward to $381,000. A woman with 1 to 3 years of college can expect earnings of $460,000; one with 4 years of college $523,000; and one with 5 or more years of college, $699,000.

Perhaps a better basis for comparing the earnings of men and women is to use the Census estimates for year-round, full-time workers. The accompanying chart shows the lifetime earnings that these workers can expect. The lifetime earnings of a woman with less than a high school education are about 59.2% of those of a man with a similar education. This proportion rises to 63.5% for a woman with 5 or more years of college.

Not all of these variations in earnings should be attributed to differences in sex and in educational attainment. A number of other factors, including ability, motivation, opportunities for employment, and family background, influence the level of income an individual will eventually attain. Nevertheless, it would appear that the number of years spent in school does have an important effect upon future earning power.

These data are derived from sample surveys of the population. They are subject to sampling variability as well as to errors of response and nonreporting. For more detailed information, the reader may wish to consult the Bureau of the Census report, *Lifetime Earnings Estimates for Men and Women in the United States: 1979*.

Figure 12.— Expected lifetime earnings for year-round, full-time workers, by sex and by years of school completed: United States, 1979 (in 1981 dollars)

[1] Education at the first level provides basic instruction in the tools of learning (elementary and primary school).

[2] Education at the second level is based upon at least 4 years' previous instruction at the first level, and provides general or specialized instruction, or both (middle, secondary, vocational, teacher-training, and high school).

[3] Education at the third level requires as a minimum condition of admission the successful completion of education at the second level, or evidence of the attainment of an equivalent level of knowledge (university, teachers' college, higher professional school).

Australia	1970	15 and over	99
Soviet Union	1979	9 to 49	100

[1] Data not reported.

NOTE.—Literacy is defined in most countries as the "ability to read and write in any language".

SOURCE: U.S. Department of Commerce, Bureau of the Census, *Demographic Estimates for Countries with a Population of 10 million or More: 1981.*

Table 167.—Instructional television programming by public television licensees, by grade level of programming hours: United States, 1980

Instructional television programming	Percent
1	2
All grade levels	**100.0**
Kindergarten through grade 4 (Predominantly children's basic education and primarily by dramatization)	45.0
Grades 5 through 8 (Predominantly science and primarily by demonstration)	37.0
Grades 9 through 12 and junior college. (Predominantly social science and primarily documentary)	15.0
College and adult education (Predominantly teacher training and primarily lectures)	3.0

SOURCE: Corporation for Public Broadcasting, *Public Television Programming by Category: 1980.*

Table 168.—Use of computers for instructional purposes in public elementary and secondary schools, by level of school: United States, 1981–82

Item	All schools	Elementary schools	Junior high schools	Senior high schools	Combined and other schools
1	2	3	4	5	6
Computers available:					
Total	120,900	28,200	27,600	62,300	4,800
Microcomputers	98,500	23,000	20,700	49,300	3,500
Terminals	24,400	3,200	6,900	13,000	1,300
Schools with computers:					
Total [1]	29,000	11,400	5,800	10,400	1,400
Microcomputers	27,500	11,000	5,800	9,500	1,200
Terminals	5,900	1,000	1,000	3,600	300
Computer use:					
Hours per computer per year	361	399	323	368	250
Hours per student per year [2]	9.3	6.1	7.4	13.2	19.8

[1] Some schools used both microcomputers and terminals for instructional purposes.
[2] Includes only those students who used computers for instruction.

NOTE.—Data are based upon a sample survey of schools. Responses were received from 92 percent of the 900 schools in the sample.
